BEYTRAX

USER MANUAL

Your site, explained step by step

Everything you need to run Dietrich-Klinghardt.com from Beytrax: events, QR tickets, live Weekly Talks, memberships, the Archive, the store and more. Easy, like a game.

Events · QR tickets · Live · Memberships · Store · QR codes

PREPARED ESPECIALLY FOR

Ana Victoria Pavón

NowOpen.tv · Dietrich-Klinghardt.com

October 2026

Version 1.1

BEFORE YOU START

Hi, Ana 👋

This manual is yours. We made it with you and Dietrich-Klinghardt.com in mind, so you can run the site calmly, without fear of breaking anything and without guessing where things are.

We wrote it as if we were explaining it to a 10-year-old. Not because things are hard, but because when something is explained simply, you get it the first time and remember it forever.

Almost every image is a real screen from your panel, with your events, your products and your memberships. What you see here is what you will see on your computer. Some show made-up names (like María Gómez or John Carter) just to show you what a ticket or a chat looks like; they are not real people.

You don't have to read it cover to cover. Use it like a cookbook: find what you want to do in the contents and follow the steps. At the end there are checklists, a glossary of odd words and a “What do I do if…?” section for when something doesn't go as expected.

Andifyouevergetstuck,writetous.That'swhatwe'reherefor.

The Beytrax team

How to read this manual

🧒 **IN PLAIN WORDS**

The idea explained with an everyday example.

💡 TIP

Something that saves you time or clicks.

⚠️ HEADS UP

Something important so nothing goes wrong.

⭐ REMEMBER

The most important thing in the section, in one sentence.

Numbered steps (① ③) always go in order. Words in this style are exactly what you will see on the screen.

PART 1

The basics

What Beytrax is, how to sign in, what's in the menu and the golden rules that apply to everything else.

What is Beytrax? **Signing in** **Your dashboard** **Golden rules**

CHAPTER 1

What is Beytrax?

Beytrax is the place where you run everything that happens on Dietrich-Klinghardt.com.

IN PLAIN WORDS

Imagine the site is a lovely shop on the street. What people see from the sidewalk is the shop window: that's Dietrich-Klinghardt.com. Behind the window there's a control room with buttons, drawers and a camera: that's Beytrax.

From the control room you arrange what's in the window, change prices, add events and turn on the camera for the Weekly Talks. Visitors never enter that room: only you and the people you invite.

Beytrax's helpers

Beytrax doesn't work alone. It has several friends, and each one does a job. You don't need to learn all their names today, but they will show up in the manual:

Beytrax · the control room

Your panel. It opens at portal.beytrax.com .

Your site · the shop window

What visitors see. Today it lives at dkk.beytrax.com and soon at dietrich-klinghardt.com .

SafeCertus · the door guard

Checks that it's really you when you sign in to the panel.

Stripe · the cash register

Charges cards and tells Beytrax when someone paid.

Mux · the TV antenna

Takes your live stream to every member's screen.

OBS · the camera

The program on your computer that sends picture and sound.

Mailchimp · the mail carrier

Keeps your subscriber list and delivers your newsletters.

Automatic emails

Beytrax sends confirmation, ticket and access emails on its own.

How a purchase travels

Visitor
picks an event

→

Stripe
charges the card

→

Beytrax
learns of the payment

→

Email
with their QR ticket

→

Door
they scan and come in

REMEMBER

You only set things up in the panel. Charging, sending emails and granting access happen on their own.

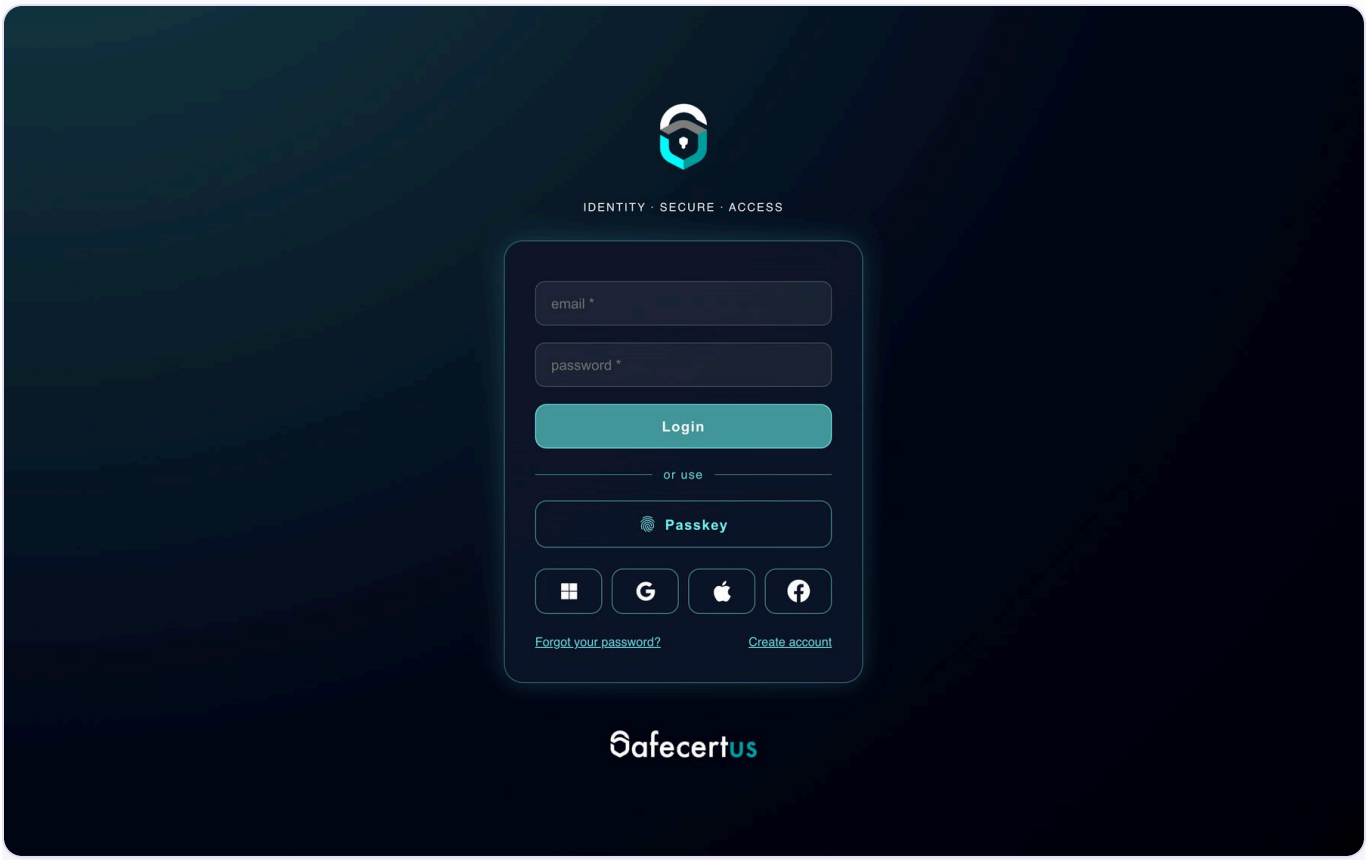

CHAPTER 2

Signing in and out of the panel

To enter the control room you go through the door with the guard, SafeCertus.

Step by step to sign in

1. Open your browser (Chrome, Safari or Edge) and type portal.beytrax.com .
2. The SafeCertus door appears, as in the image below.
3. Type your email and password, and press Login .
4. Done! You land on your Dietrich Klinghardt dashboard.

The front door. You can also sign in with a Passkey or with your Microsoft, Google, Apple or Facebook account.

TIP

The Passkey button lets you sign in with your fingerprint or Face ID, without typing a password. It's the fastest and also the safest way. The Google, Apple, Microsoft and Facebook buttons work as long as that account uses the same email we gave access to.

If you forgot your password

Press Forgot your password? below the sign-in button. You'll get an email to create a new one. It's like asking the locksmith for a new key: the old one stops working.

Changing the panel language

At the bottom of the left menu there are two buttons: ES and EN . They switch the whole panel to Spanish or English. The screenshots in this manual show the panel in Spanish.

Signing out

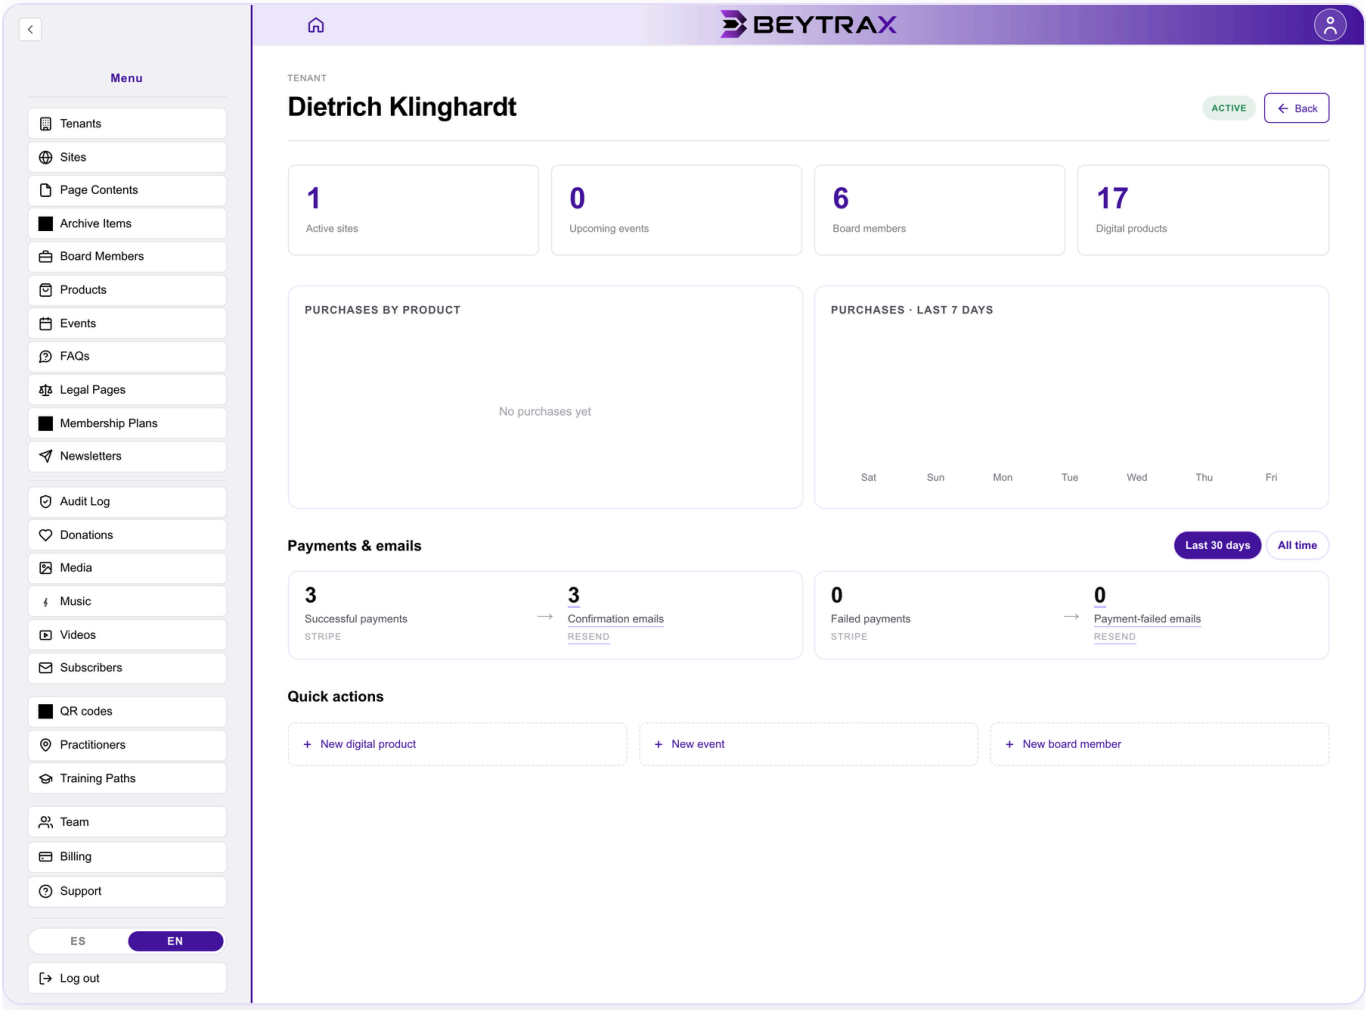

At the bottom of the menu is Cerrar sesión (Sign out). Always use it when you work on a computer that isn't yours.

> ⚠ HEADS UP
>
> Never share your password, not even with someone on your team. If someone else needs the panel, invite them with their own email (chapter 18). That way everyone has their own key and we know who made each change.

CHAPTER 3

Your dashboard and the menu

The first thing you see when you sign in is your dashboard: a summary of how everything is going.

Your dashboard. The menu is on the left; the important numbers are in the middle.

What the dashboard tells you

- The four cards at the top: how many active sites you have, how many events are coming, how many team members appear on the site and how many products are in the store.
- Purchases by product and Purchases · last 7 days: what is selling and when.
- Payments and emails: how many Stripe payments went through and how many confirmation emails were sent. Also the payments that failed. You can view Last 30 days or All time .
- Quick actions: shortcuts to create a product, an event or a team member.

If you ever get lost, click the little house at the top left and you're back here.

> 💡 TIP
>
> If you see a small black square instead of a little icon next to some menu options, don't worry: it's just the icon. The section works perfectly.

The menu, option by option

Option	What it holds	How often
Page contents	The site's text and blocks (titles, notices, sections).	Often
Events	Courses, workshops, multi-day courses and the Weekly Talks.	Often
Archive	What members see in Archives (recordings, PDFs, diagrams).	Every week
Media	Your library of photos and files.	Often
Products	The store: books, glasses, kits, audio.	**Sometimes**
QR codes	Codes to print on flyers, signs or products.	**When printing**
Music and Videos	SoundCloud playlists and videos from YouTube, Vimeo and others.	**Sometimes**
Board	The team profiles that appear on the site (for example, the Sophia team).	**Sometimes**
Practitioner directory	The “Find a Practitioner” list.	**Sometimes**
Trainings	The certification programs (A.R.T., PK, MFT, SRT, ANK).	Almost never
FAQs and Legal pages	FAQs, privacy notice and terms.	Almost never
Membership plans	The monthly and yearly Weekly Talks plans.	Almost never
Subscribers and **Newsletters**	Who subscribed, and bulk emails.	**Sometimes**
Donations	Donations to the foundation. View only.	**To review**
Audit log	The diary of who changed what and when.	To review
Team, Billing, Support	Who else uses the panel, your Beytrax plan and help.	When needed
Clients and Sites	Technical settings (payments, domain, email).	Better not touch

CHAPTER 4

The golden rules

Six ideas that apply to the whole panel. Learn these and you already know half of it.

1. Nothing changes until you press Save

The purple Save (Guardar) button is at the top right of every screen. It's like doing your homework: if you don't put it in your backpack, it doesn't get to school. If you close the screen without saving, the change is lost.

2. Wait about 2 minutes

When you save something, Beytrax rebuilds the site's shop window. It takes about 2 minutes.
Then refresh the site page (Cmd + R on Mac or Ctrl + R on Windows) and you'll see your change.

3. The “Status” decides whether something shows

Status	What happens?	In plain words
Draft	Nobody sees it on the site. You can work calmly.	A drawing still in your room.
Published	Everyone sees it on the site.	The drawing is already on the fridge.
Sold out	It shows on the site, but can't be bought anymore.	The popsicle is still in the freezer but says “none left”.
Cancelled	Events only: the event is off.	The party was called off.

The Status is always in the right-hand column, next to the Order.

4. The “Order”: the smallest number goes first

If you want something to appear before something else, give it a smaller number. 0 comes before 1 , and 1 before 2 . Like lining up at school.

5. Prices are written in cents

IN PLAIN WORDS

Prices are written without a decimal point: add two zeros to the dollar price. That way the computer never gets confused by decimals.

If the price is…	You type…
$25.00 (monthly membership)	`2500`
$279.00 (yearly membership)	`27900`
$950.00 (one day of the course)	`95000`
$1,500.00 (full course)	`150000`
$39.99	`3999`

6. The asterisk * means “required”

Fields with an asterisk must be filled in. If one is missing, the panel won't let you save and marks in red what's missing. Don't panic: just fill it in and save again.

💡 TIP: DUPLICATE INSTEAD OF STARTING FROM SCRATCH

In any event or product, the three-dot button ⋮ (next to Save) has a Duplicate option. It makes an exact copy so you only change the date, the title and the payment link. It saves a lot of time.

⭐ REMEMBER

Save, wait 2 minutes and check that the Status says Published. That solves 9 out of 10 questions.

PART 2

Your site

How to change text, photos, music, videos and the profiles of the team, trainings and practitioners.

Site text **Photos and files** **Music and videos** **Team and directories**

CHAPTER 5

Changing the site's text

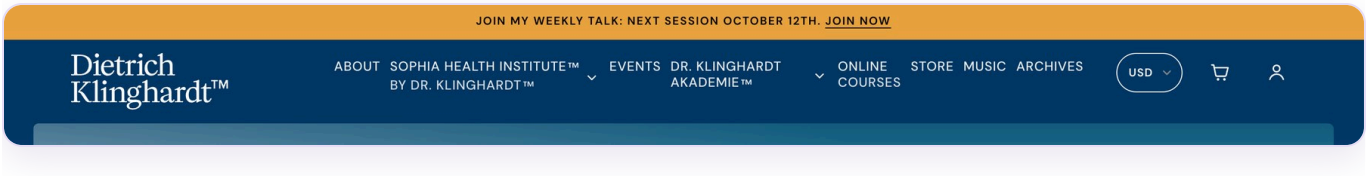

Almost all the text on the pages lives in Page contents.

IN PLAIN WORDS

The site is built like a LEGO model. Each piece is a block with its text, photo or music. To change what a piece says, you find that piece and change its text. The rest of the model doesn't move.

Real example: the orange banner at the top

At the very top of every page there is an orange strip inviting people to the Weekly Talks. It has a trick: the date fills in by itself. Beytrax finds the next scheduled Weekly Talk, free or members-only, and writes its date at the end. If none is scheduled, it says “next session coming soon”.

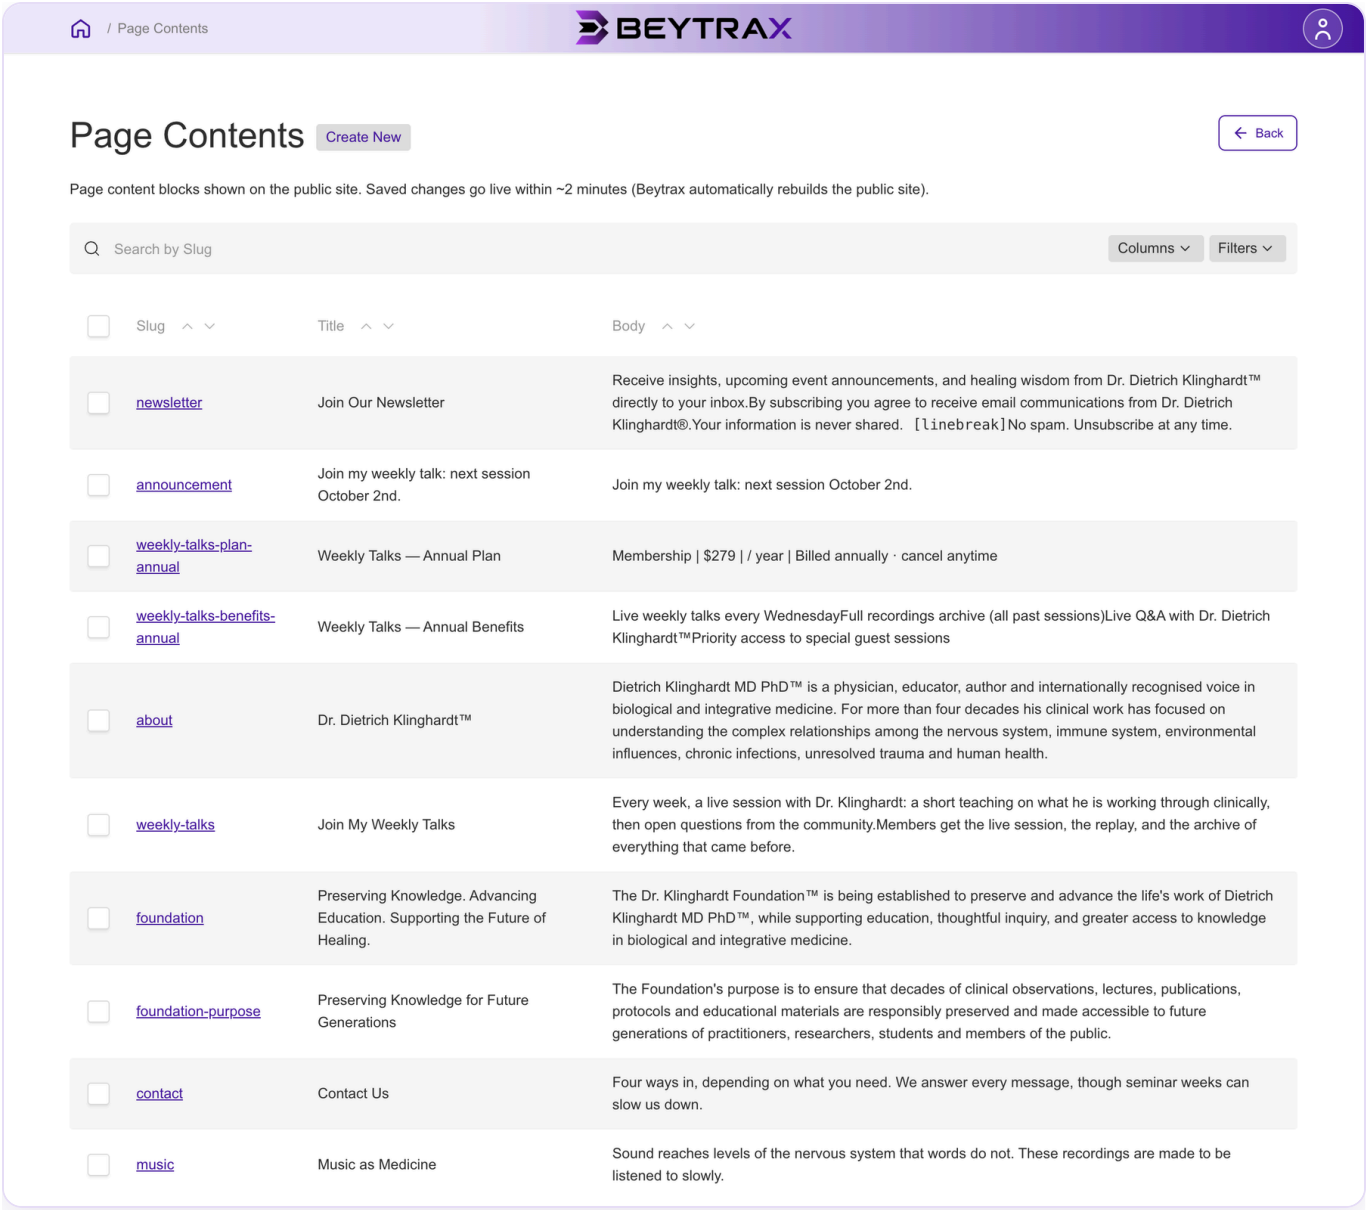

The orange strip with the date of the next Weekly Talk, filled in automatically.

So to change the date you don't touch this block: just schedule the next Weekly Talk (chapter 11). You only edit this block to change the banner's words:

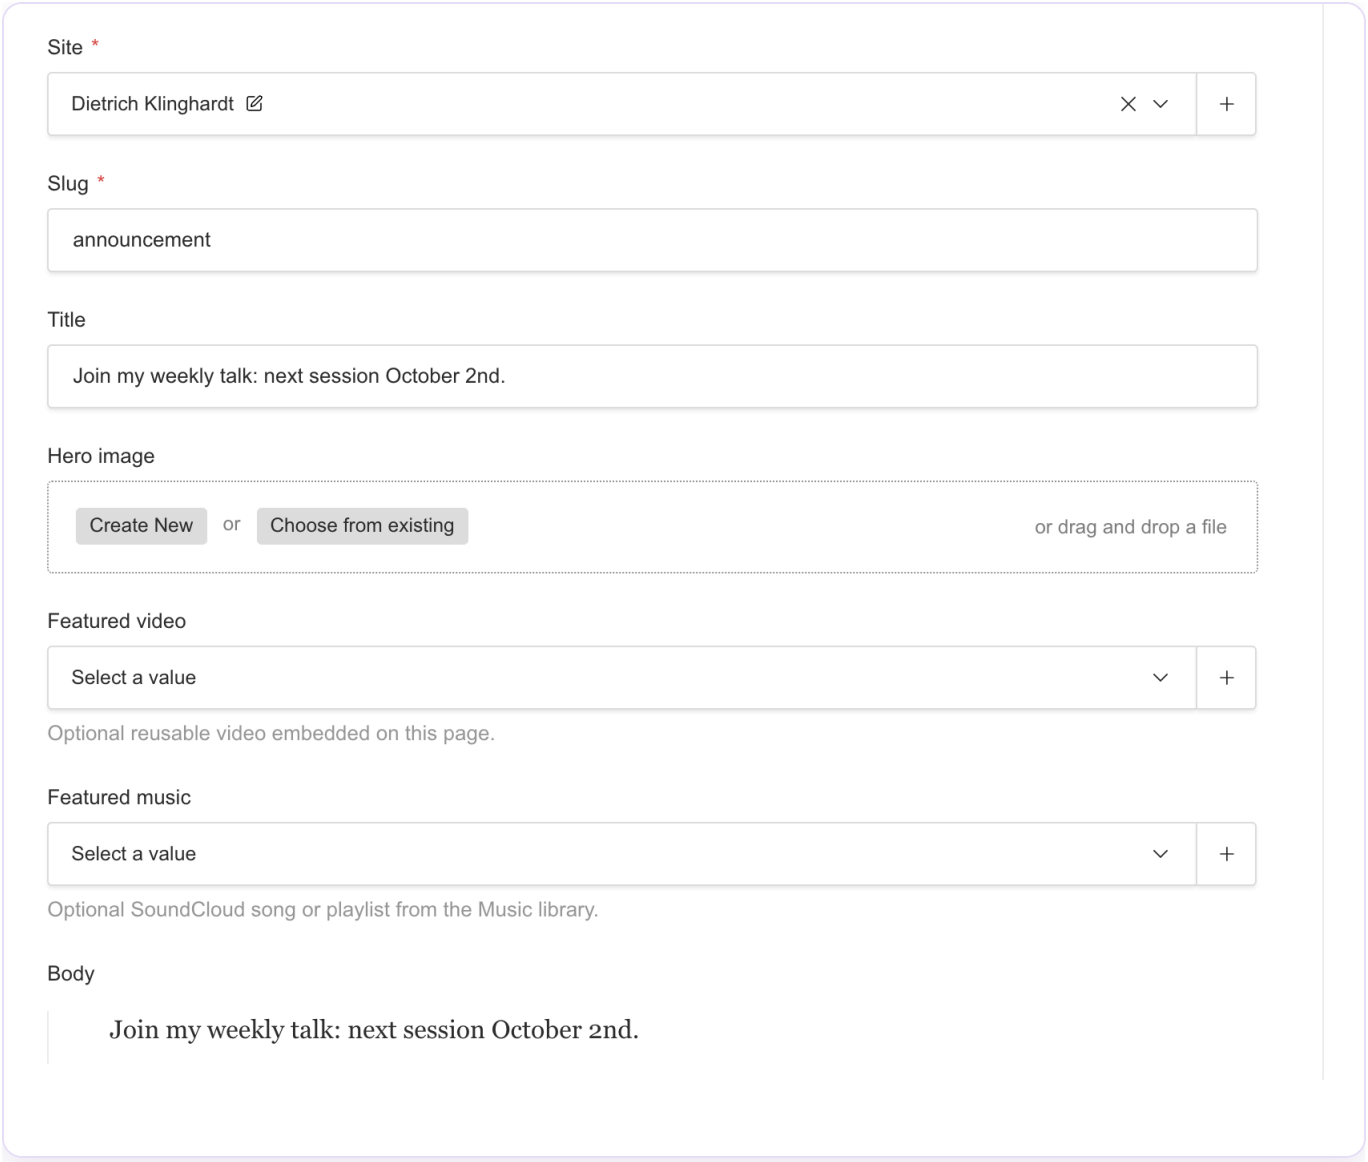

1. In the menu, go to Page contents . You'll see the list of all the site's blocks.
2. In the search box at the top type weekly talk and open the block that starts with “Join my weekly talk”.
3. Scroll down to the Content box and change the words you want.
4. Press Save , wait 2 minutes and refresh the site. Done!

TIP

Keep the sentence ending in a date written in English, for example “next session October 2nd.”, even if it's old. That's the signal for Beytrax to replace it with the next Weekly Talk's date. If you delete it, the banner stops updating.

The list of blocks. Each row is a LEGO piece of the site.

The orange banner block. You only change the words in the “Content” box; Beytrax adds the date.

⚠ HEADS UP

Don't change a block's Slug (URL) or Kind. They are like the piece's name and address: the site uses them to find it. If you change them, the block disappears from the site.

Only change the title, text, image, video or music.

What else you can change in a block

- Main image: pick a photo from your library (Choose from existing) or upload it by dragging it in.
- Featured video and Featured music: pick one from your Videos or Music library (chapter 6).

> 💡 TIP
>
> If you don't know which block it is, copy a sentence you see on the site and paste it into the Page contents search box. It's like playing Where's Waldo, but with a magnifying glass.

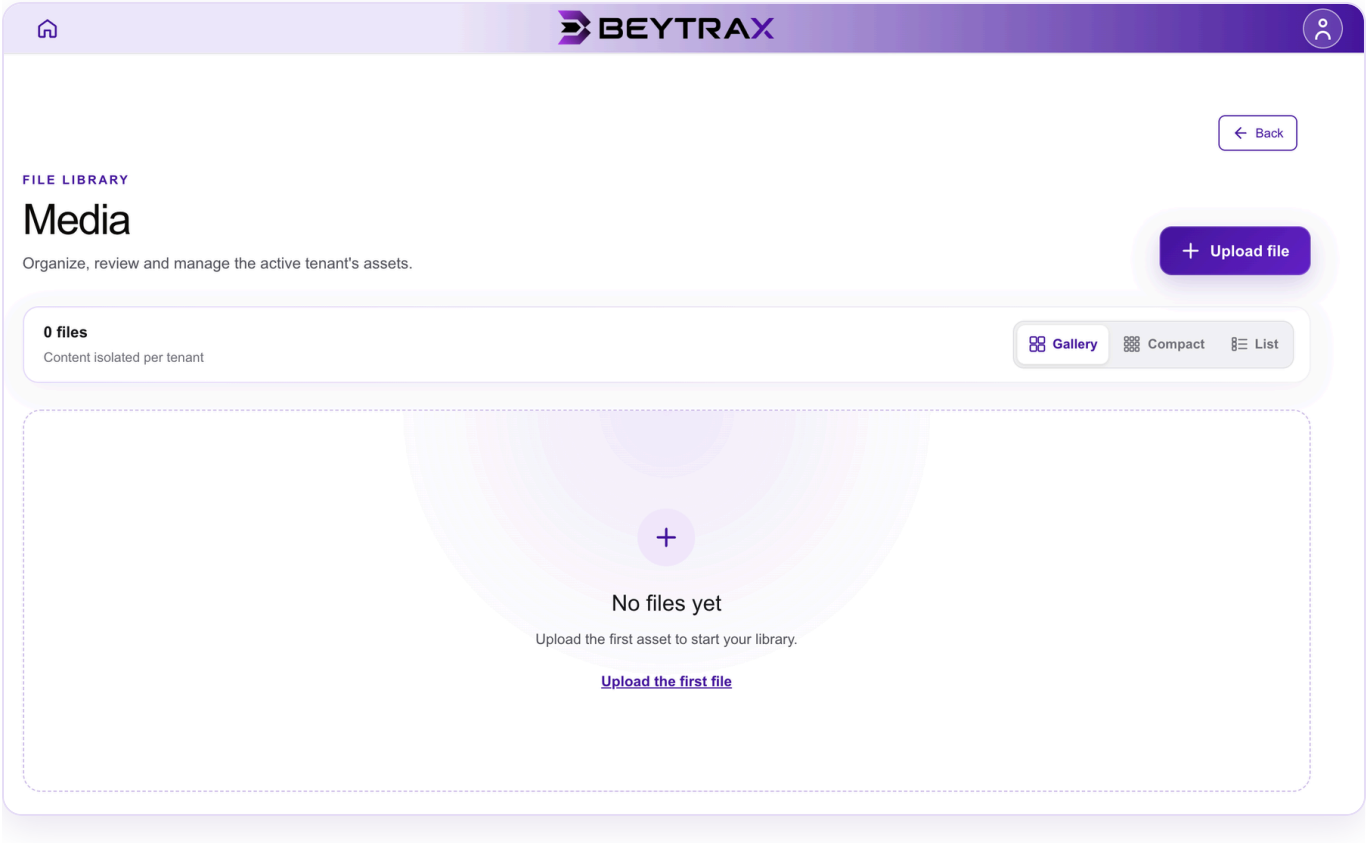

CHAPTER 6

Photos, music and videos

Three libraries to store things once and use them in many places.

Media: your photo box

In Media you keep photos, images and files. Press Upload file or drag them onto the screen. You can view them as Gallery , Compact or List .

The media library. Only you and your team see it.

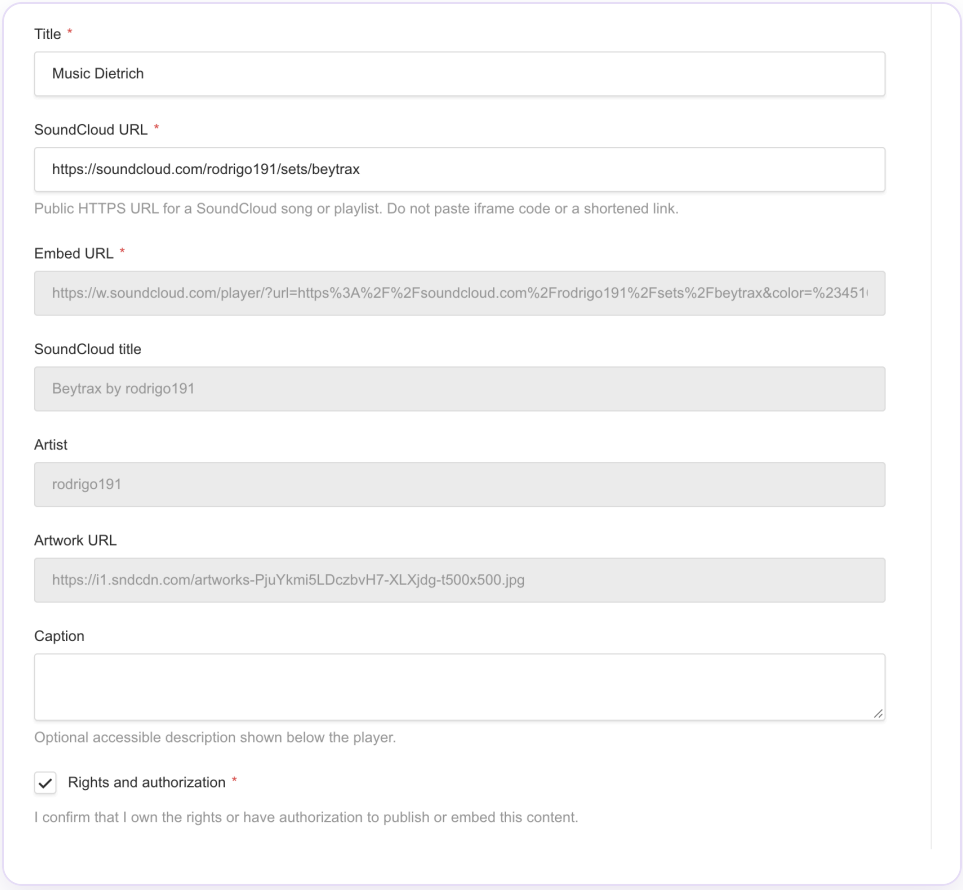

> TIP
>
> Give your photos clear names before uploading them, for example nyc-november-2026-cover.jpg. Six months from now you'll be glad you did.

Music: SoundCloud playlists

1. Go to Music and press Create .
2. Type a Title and paste the public SoundCloud link of the song or playlist in SoundCloud URL . Paste the normal link, not the embed code or a shortened link.

3 Tick Rights and authorization . It's your promise that you have permission to publish that music.

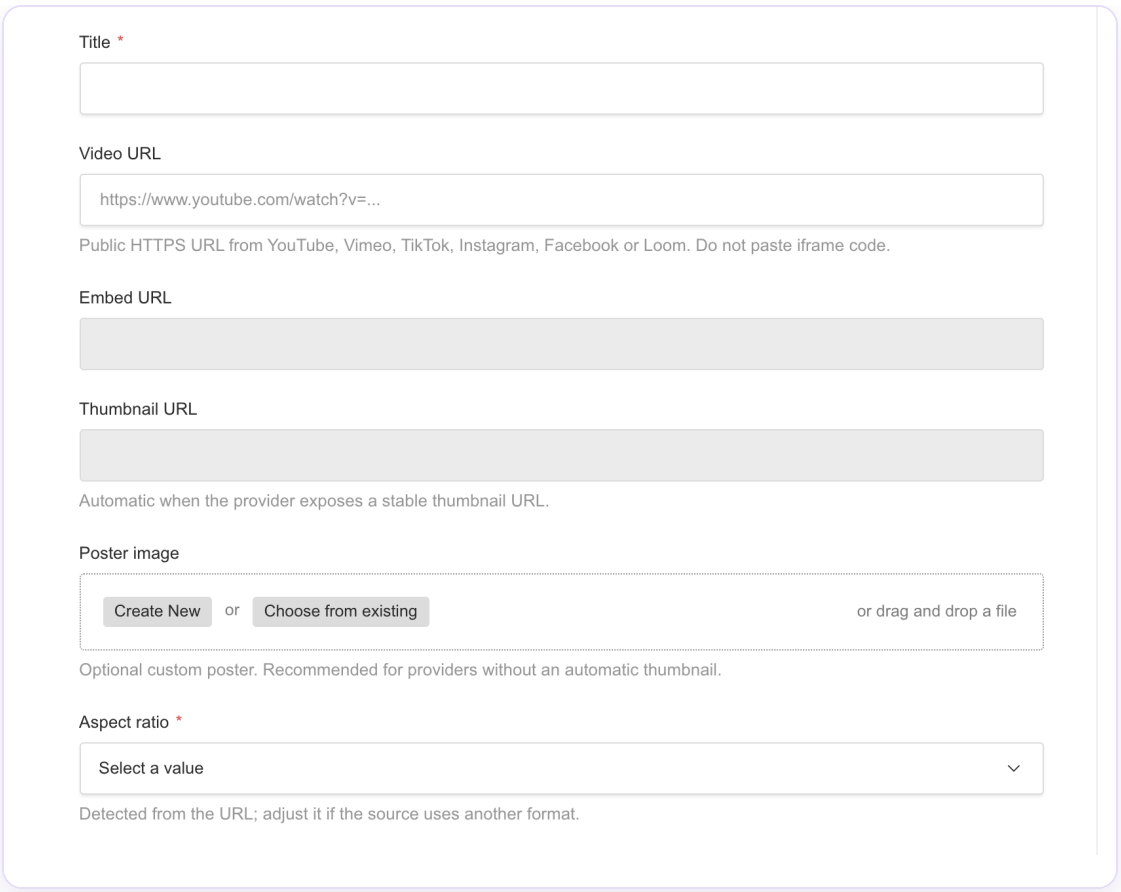

4 Leave the status as Active and press Save . Beytrax fills in the artist and the cover on its own.

The “Music Dietrich” playlist already on your site.

Videos: YouTube, Vimeo and more

In Videos Create you paste the link of a YouTube, Vimeo, TikTok, Instagram, Facebook or Loom video. Same as music: paste the normal link, not the iframe code. If you like, upload a Cover image so the video looks nicer before someone presses play.

Adding a new video. You can then pick it in any page block.

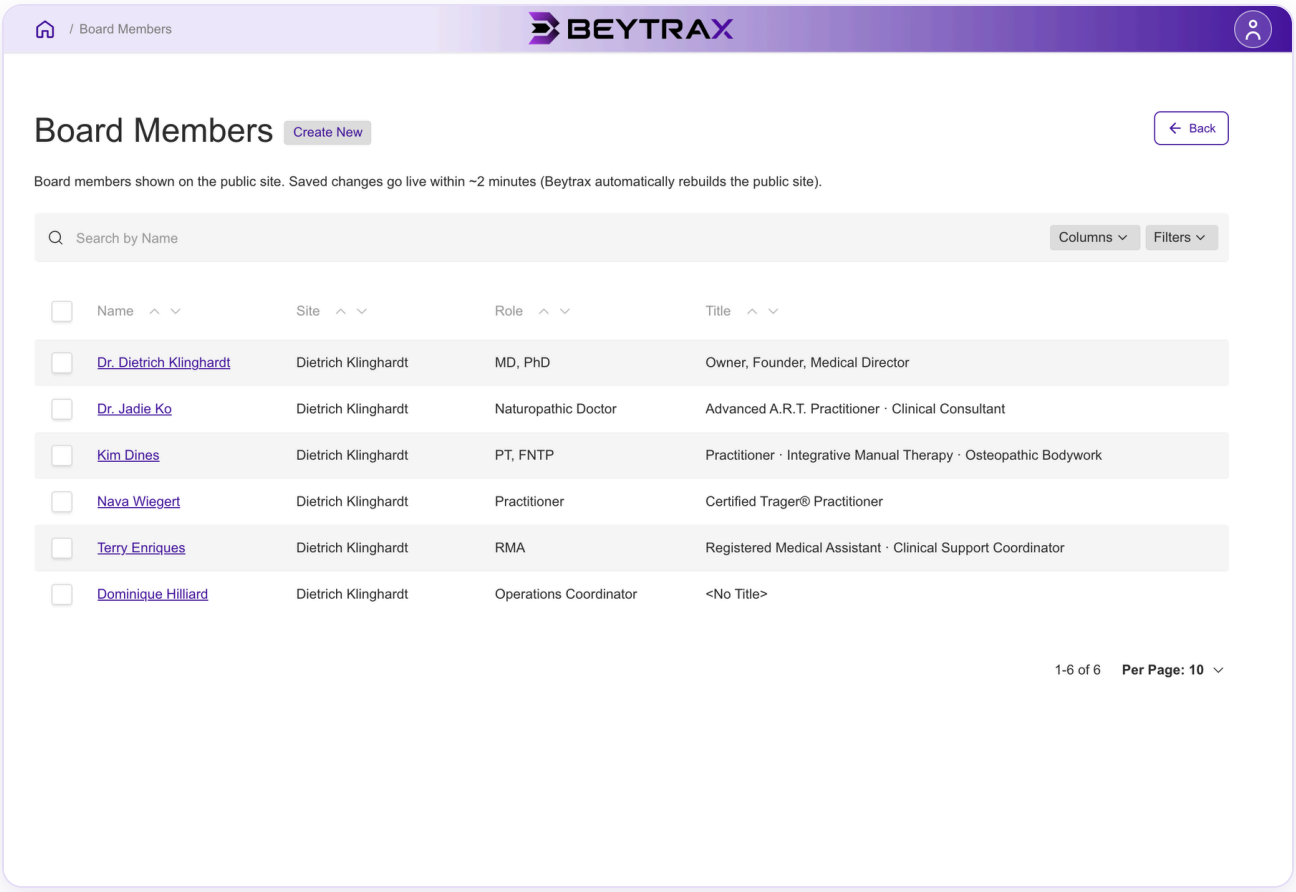

CHAPTER 7

Team, trainings and practitioners

Three lists that work the same way: each row is a profile, and each profile shows on the site.

Board: the team profiles

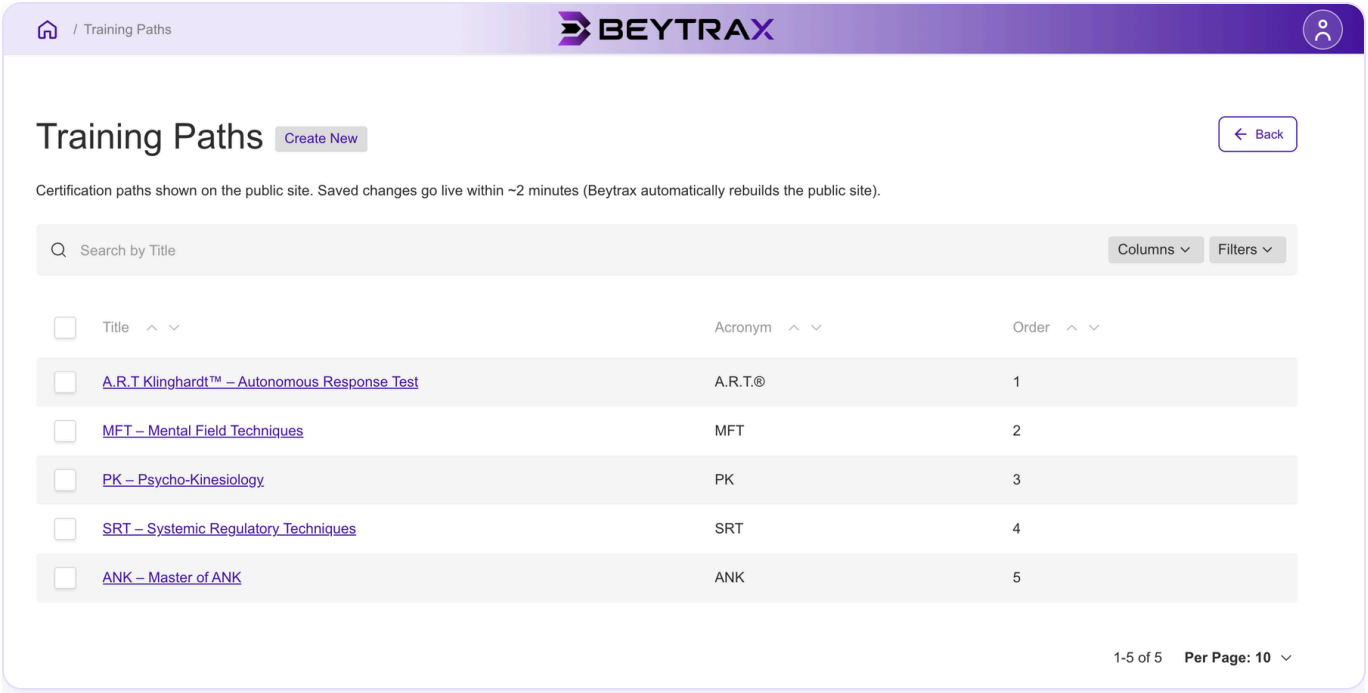

Board holds the people shown on the team pages, like Meet Our Team at Sophia Health Institute. Each profile has a name, role, photo and bio. To add someone press Create ; to change something, click their name. To remove someone from the site, delete their profile.

The team profiles.

Trainings: the certification programs

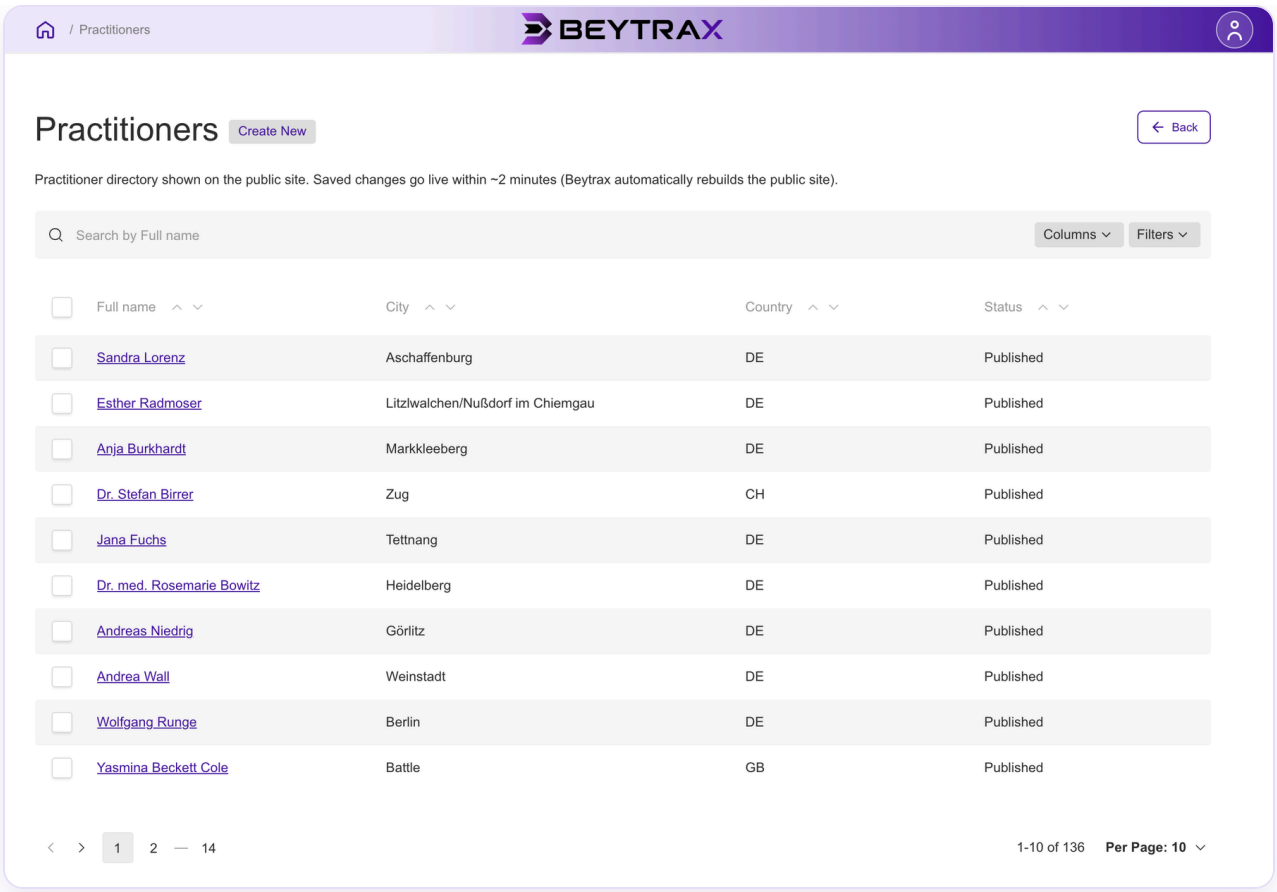

Trainings holds A.R.T., PK, MFT, SRT and ANK, with their levels, syllabus and requirements. The dates they're taught aren't entered here: they are events, and in each event you pick which training it belongs to (chapter 8). That way they show up on their own on each training's dates page.

The five Akademie trainings.

Practitioner directory

It's the Find a Practitioner list: name, city, country and contact details of each certified practitioner. Use the search box at the top to find someone quickly.

The directory, with more than a hundred practitioners.

FAQs and Legal pages

They work the same: Create , write, Save . Legal pages (privacy, terms) are normally left alone; if a lawyer asks for a change, this is where it's made.

PART 3

Events

How to create an event, charge for it, sell it by day, send QR tickets and welcome people at the door.

Create an event · Charge with Stripe · Day passes · QR tickets · The door

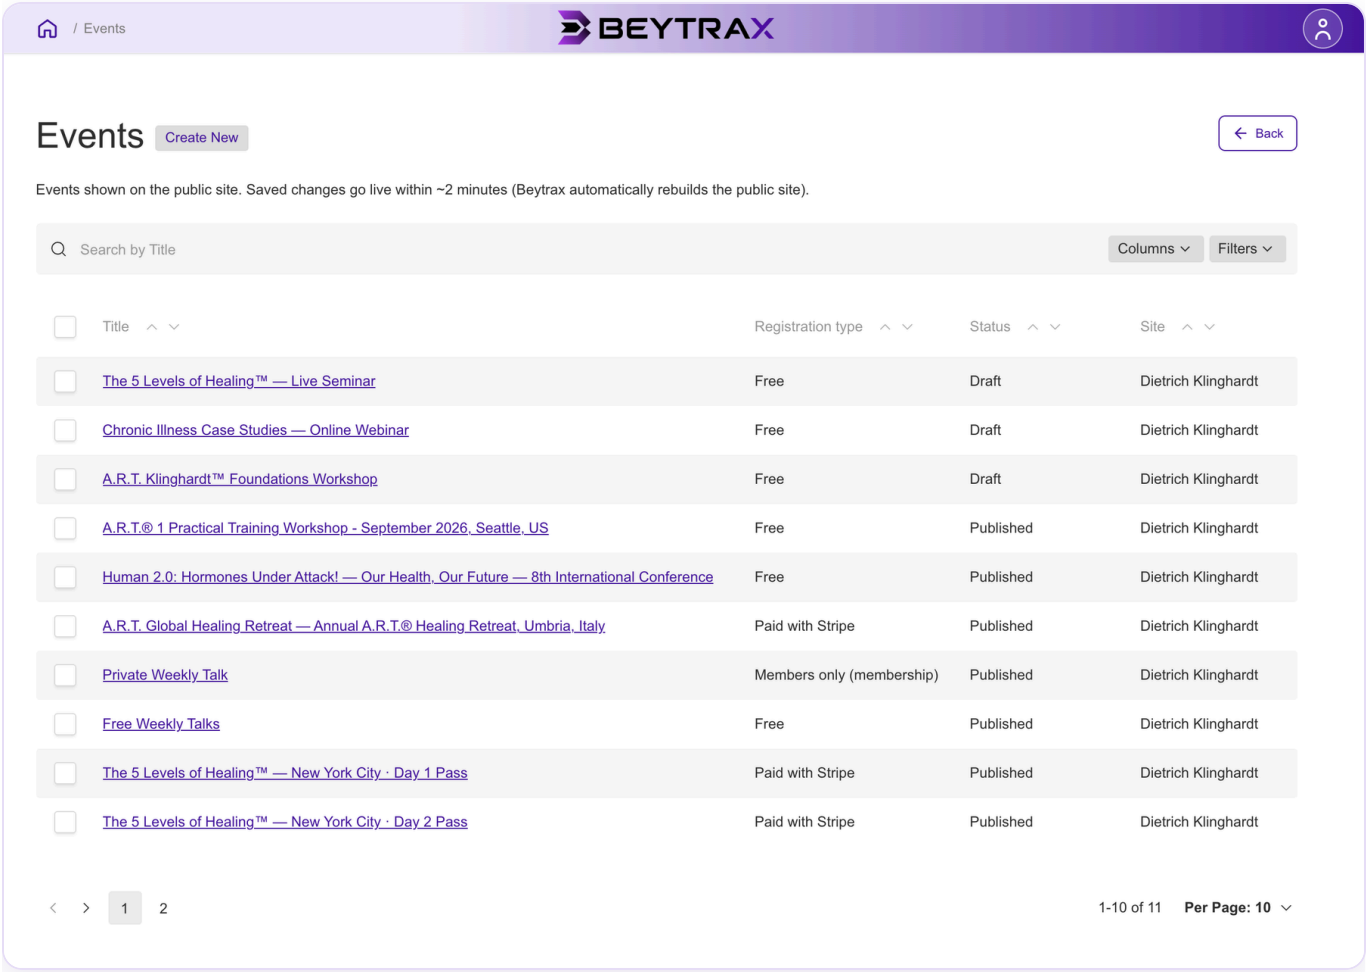

CHAPTER 8

Creating an event

Events are the heart of the site: courses, workshops, congresses and Weekly Talks.

IN PLAIN WORDS

Each event is a poster on the site's notice board. The poster says what it is, when and where, how much it costs, and has a button to save a spot. You make the poster in the panel and Beytrax pins it on the board.

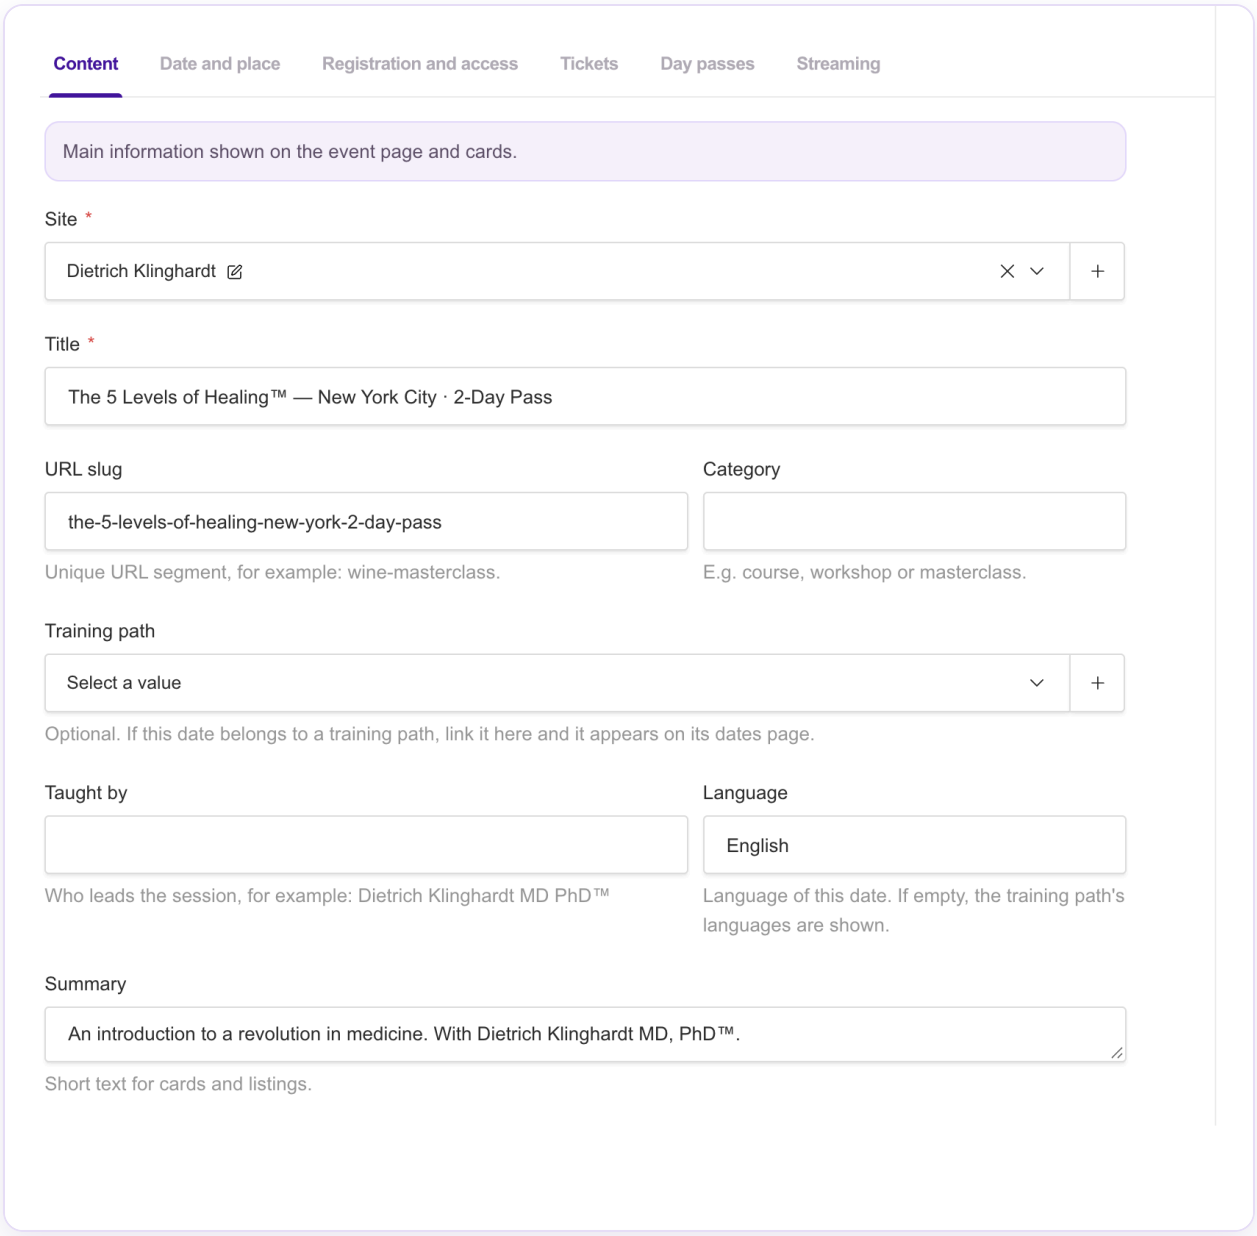

The list of events. The Create button is at the top, next to the title.

The six tabs of an event

Each event has tabs, like a folder. Fill them in from left to right:

Tab	What goes there
Content	Title, description, who teaches, language, image.
Date and place	When it starts and ends, time zone and address.
Registration and access	Whether it's free, paid or members-only, the purchase policy and the price.
Tickets	QR tickets and checking them at the door (chapter 10).
Day passes	For multi-day courses also sold by the day (chapter 9).
Broadcast	For live streaming, like the Weekly Talks (chapter 11).

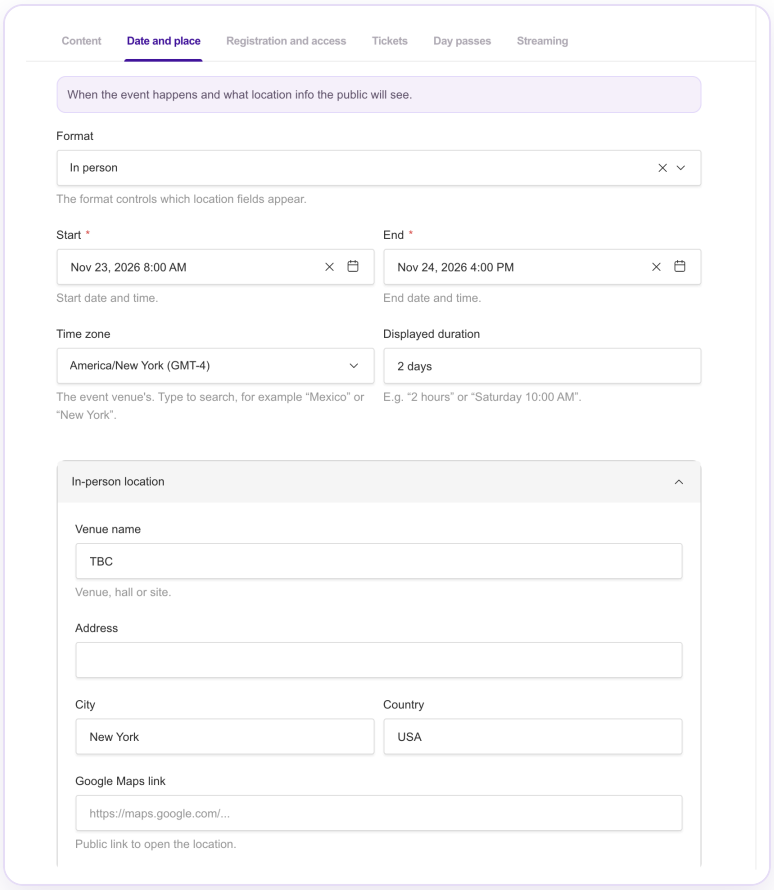

Tab 1 · Content

The Content tab of the New York course.

- Title: the event's big name.
- Friendly URL: the last part of the event's address, for example five-levels-nyc-2026 . Letters, numbers and hyphens only.
- Training: if the event is a date of A.R.T., PK or another training, pick it here and it will appear on that training's page.
- Teacher and Language: who teaches the course and in what language.
- Summary: a short sentence for the cards in the events list.
- Description, Requirements, What you'll learn and Tags: the full information shown on the event page.

Tab 2 · Date and place

Dates, time zone and location.

- Format: In person , Online or Hybrid . Depending on your choice, the address or platform fields appear.

- Start and End: date and time. Both are required, and End can't be earlier than Start.
- Time zone: pick it from the list; type to search, for example New York or Mexico City.

- Displayed duration: what you want the site to say, for example “2 days” or “8 hours”.
- In-person location: venue name, address, city, country and the Google Maps link.

> ⚠ WATCH THE TIME ZONE
>
> If the time zone is wrong, the event time shows wrong on the site and the door opens at the wrong time. Always use the zone where the event happens, not your computer's.

Tab 3 · Registration and access

Here you decide how people get in. Registration type has three options:

No charge

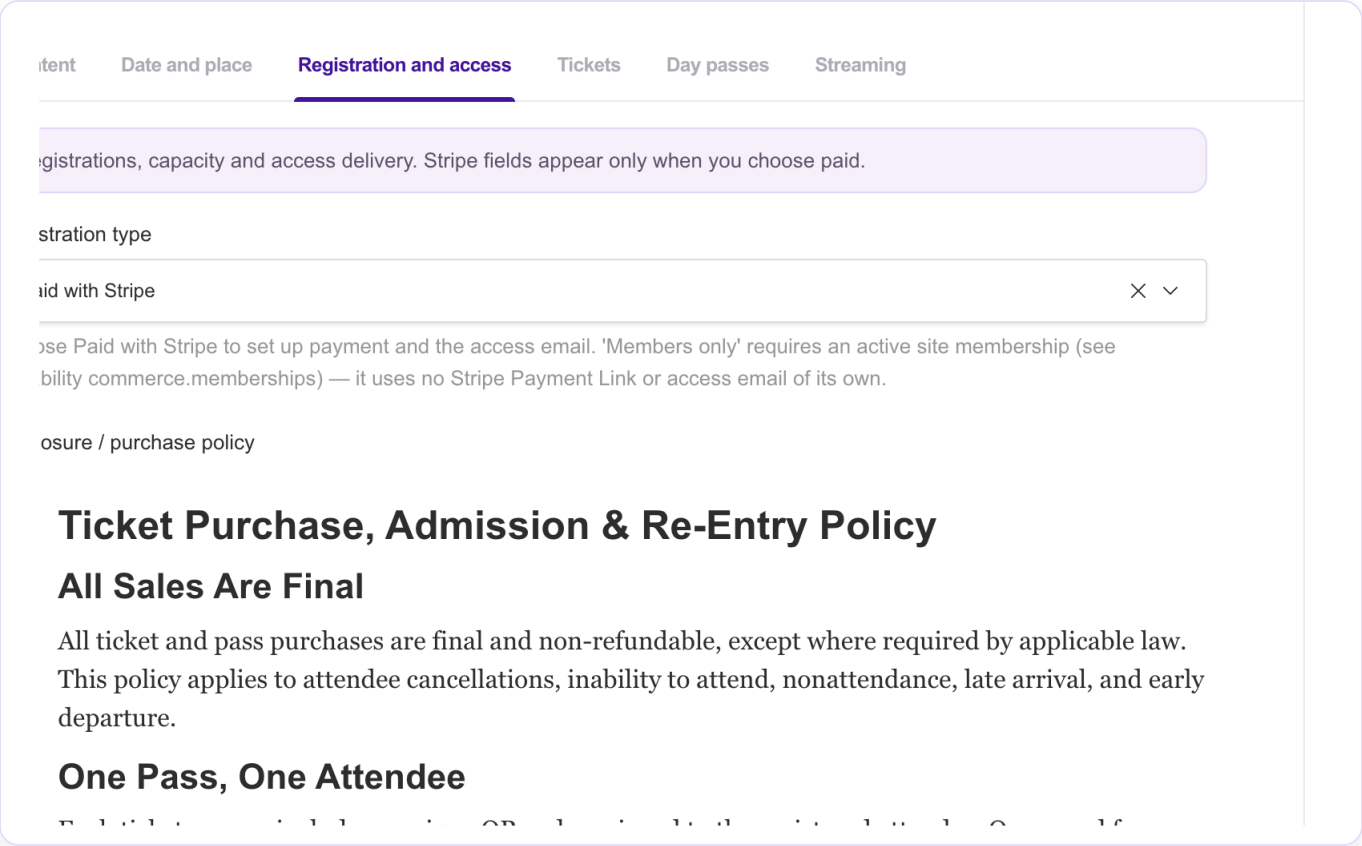

Free event, like the Free Weekly Talks.

Paid with Stripe

Paid event. The price and Stripe link fields appear.

Members only (membership)

Only people with an active membership get in, like the Private Weekly Talk. No Stripe link of its own needed.

Registration and access, with the New York course's purchase policy.

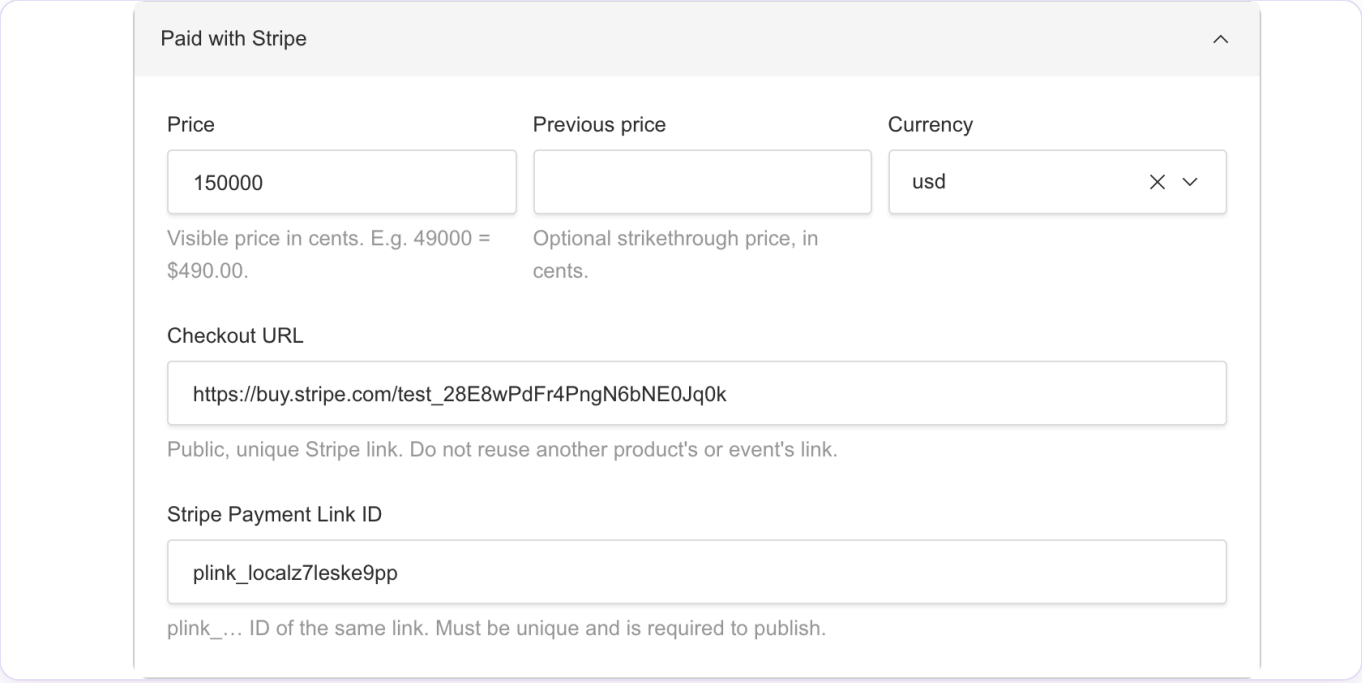

The purchase policy (Notice / purchase policy)

It's the fine print the buyer accepts: refunds, one person per ticket, ID, wristband, re-entry. It shows on the event page as a section that opens with a +. Dietrich Klinghardt's in-person events already have the Ticket Purchase, Admission & Re-Entry Policy. If an event has no policy, leave this box empty.

Capacity, registration deadline and countdown

- Maximum capacity and Sold-out message: how many spots there are and what the site says when they run out.
- Registration deadline: a date shown on the site. Heads up: it's informational, it doesn't turn off the Stripe link. To really stop selling, change the Status to Sold out .
- Show countdown: adds a little clock on the site.

Paid with Stripe (paid events only)

The payment fields appear when you choose “Paid with Stripe”.

- Price: in cents (golden rule 5). Previous price is optional and shows crossed out, for promotions.

- Checkout URL: the Stripe payment link, the one starting with https://buy.stripe.com/ .
- Stripe Payment Link ID: the code of that same link, starting with plink_ . Without it you can't publish, because that's how Beytrax knows who to send the ticket to.
- Access after payment: private information the buyer gets by email when they pay (for example, arrival instructions).

👩 **WHERE DO I GET THE STRIPE LINK?**

1. Go to Dietrich Klinghardt's Stripe account and open Payment Links.
2. Create a new link with the event's name and price.
3. Copy the link (the one starting with https://buy.stripe.com/) and paste it into `Checkout URL` .
4. Open that link inside Stripe: in the address bar you'll see a code starting with plink_ . Copy it and paste it into Stripe Payment Link ID .

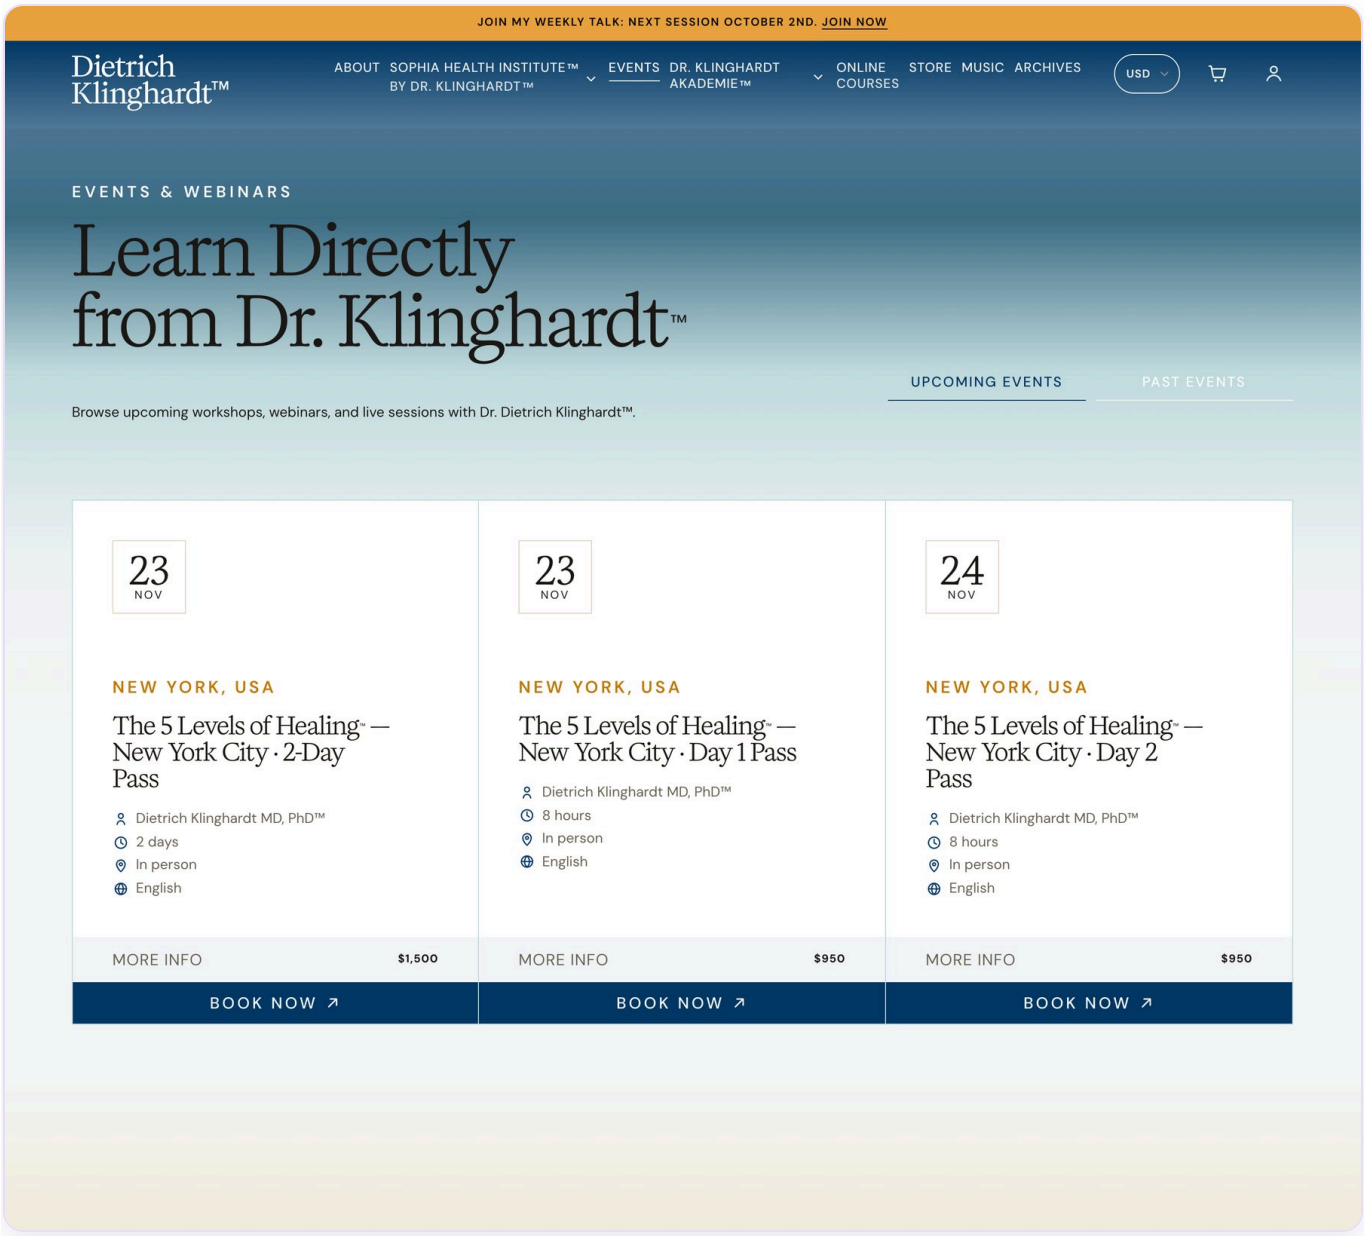

⚠️ HEADS UP

Each event and each product has its own Stripe link. Never reuse another one's: if two things share a link, Beytrax doesn't know which ticket or access to send. And the price you type in Beytrax must match the link's price in Stripe.

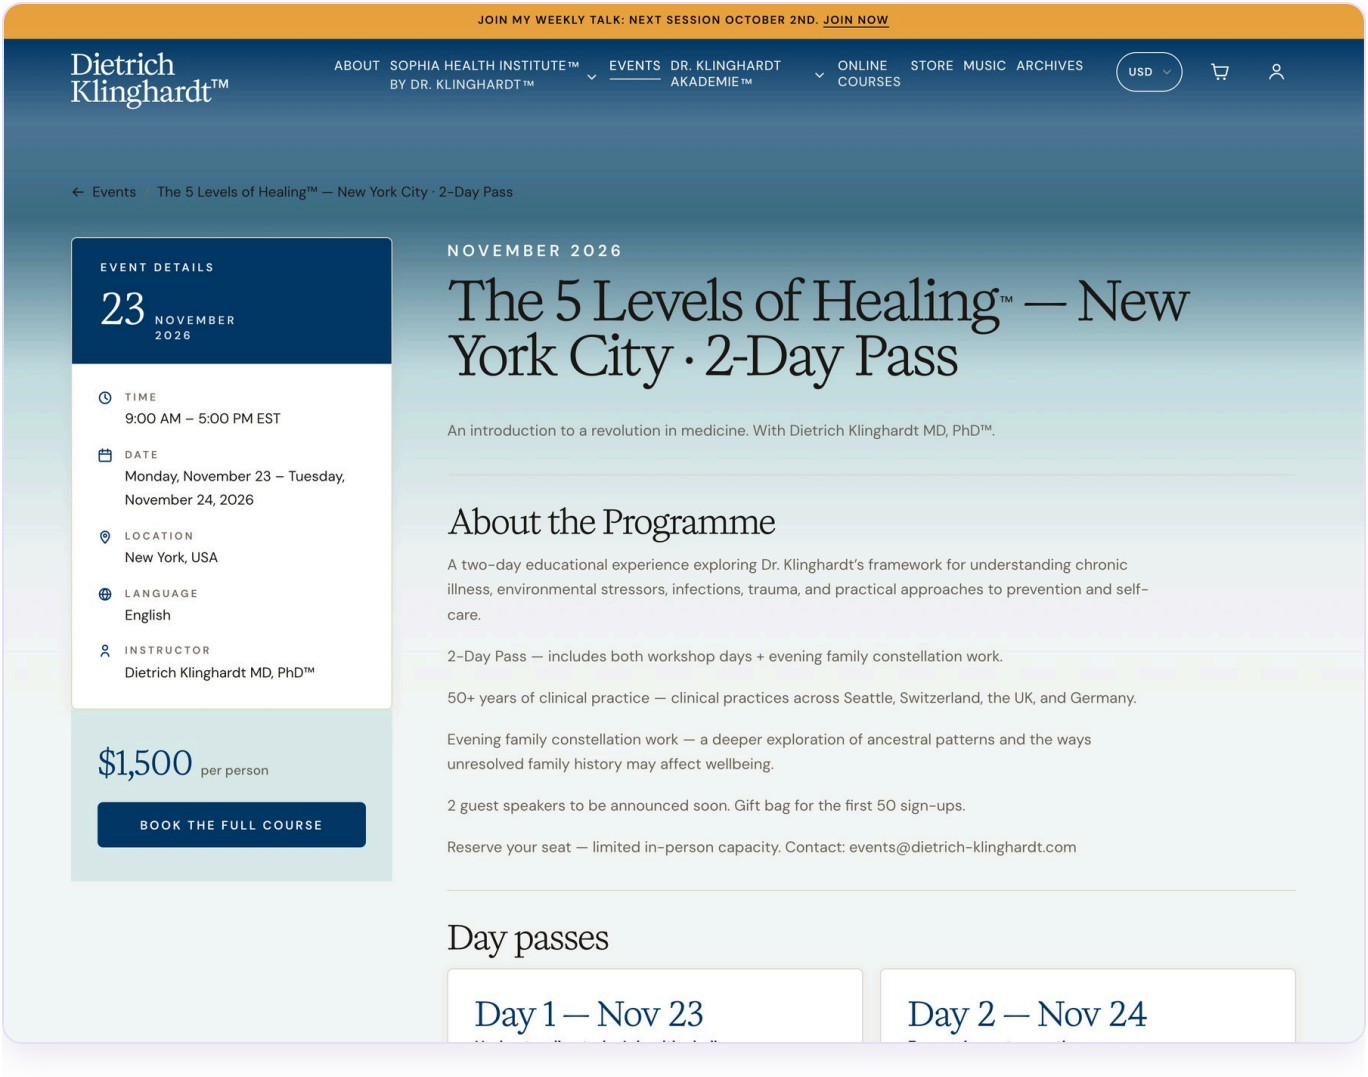

Before you finish: Status and Order

In the right column set the Status to Published when everything is ready (or leave it as Draft while you work) and press Save .

How your visitors see it

The site's Events page: each published event appears with its price and its “Book now” button.

The New York course page, with everything you entered in the tabs.

⭐ REMEMBER

Content, Date and place, Registration and access, Status Published, Save. That's the path of every event.

CHAPTER 9

Multi-day courses and day passes

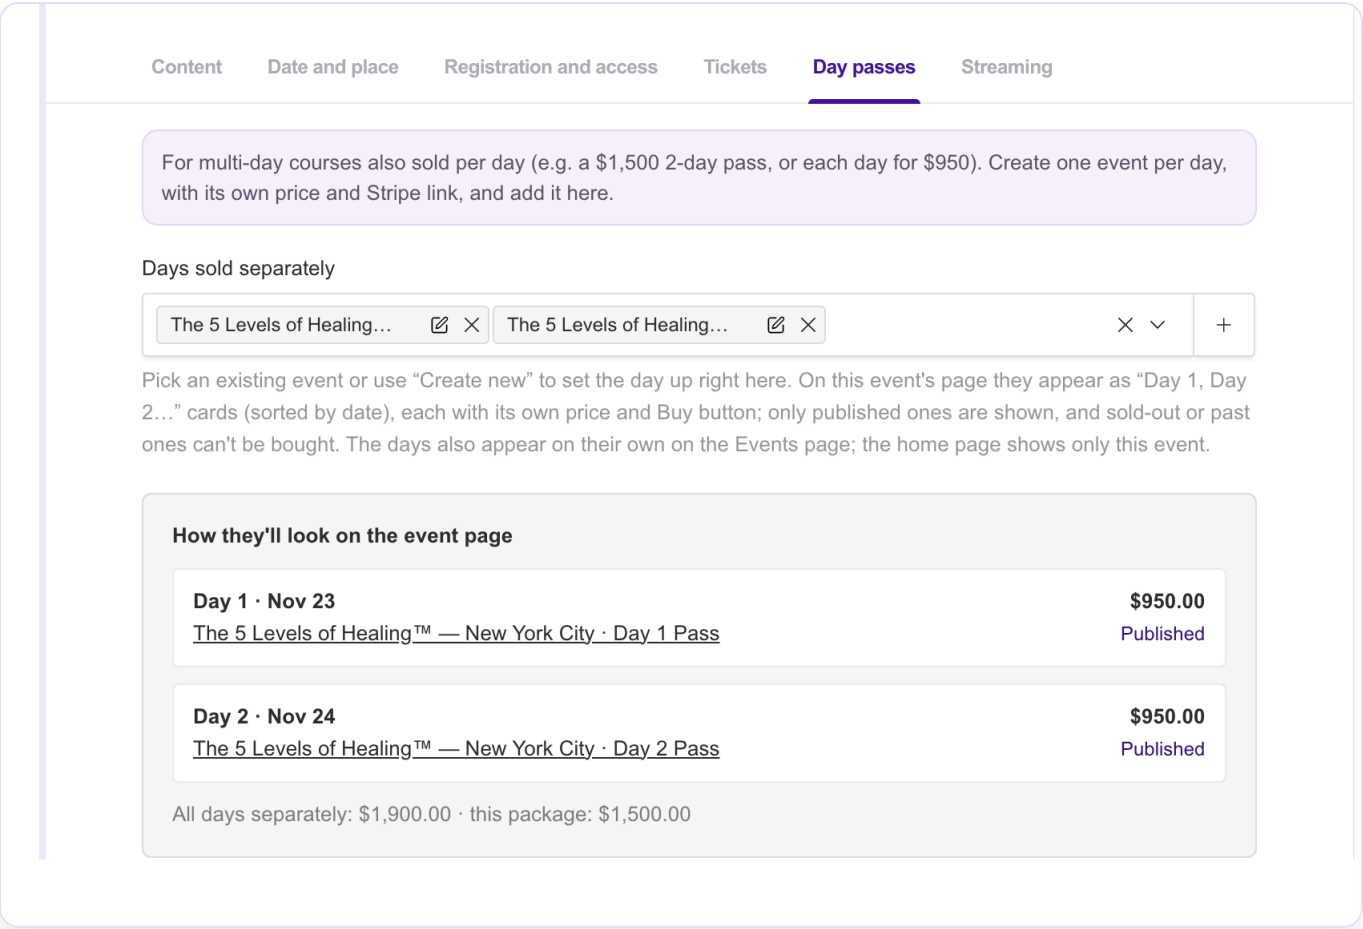

For when a course lasts several days and you want to sell it whole and also by the day.

👱 **IN PLAIN WORDS**

It's like a meal combo: you can buy the full combo (the 2-day course for $1,500) or each item separately (each day for $950). The combo is cheaper than buying everything separately, and Beytrax explains it to your visitors on its own.

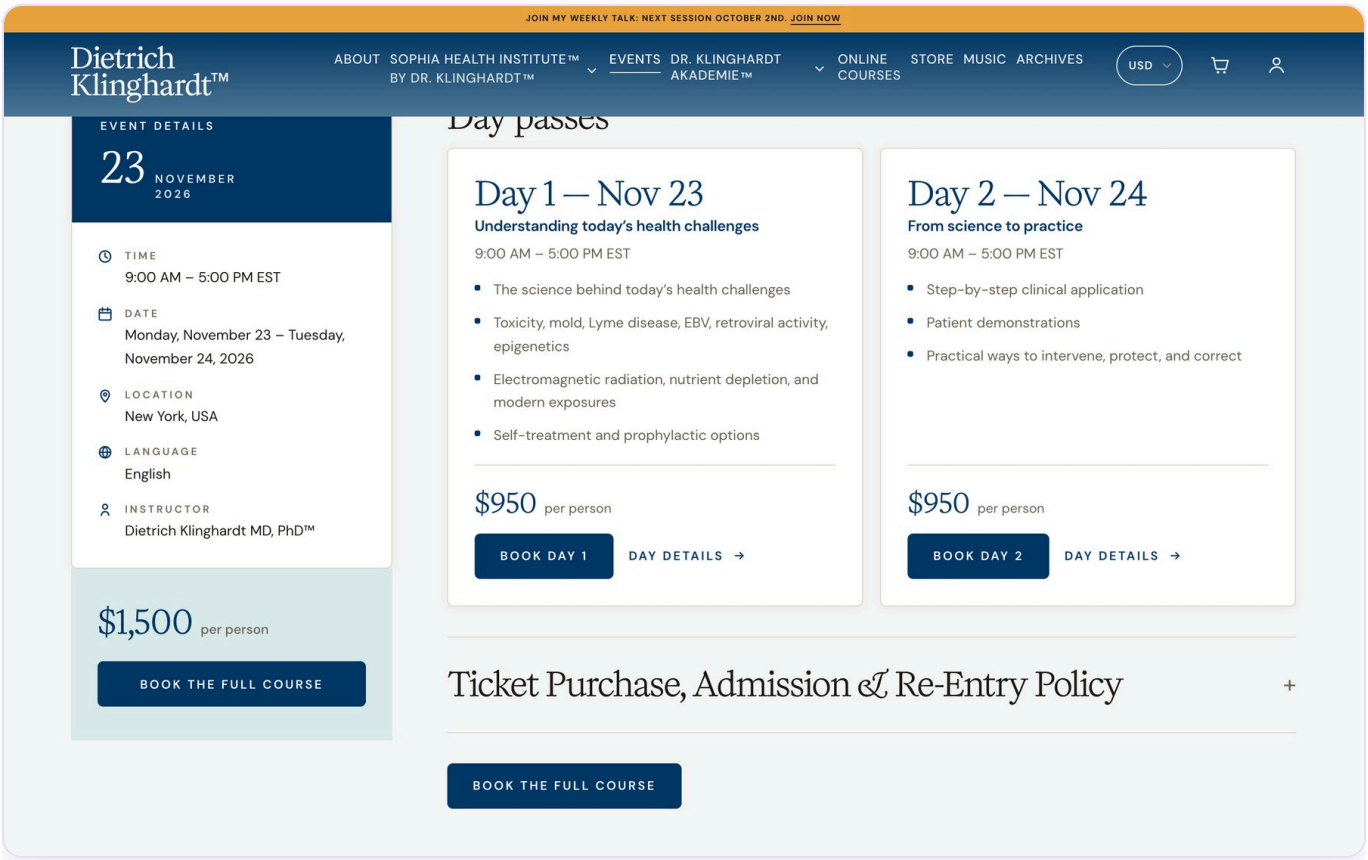

Step by step

1. Create one event per day (for example, Day 1 and Day 2), each with its date, price and its own Stripe link. Publish them.
2. Create the full-course event (the combo), with its price and Stripe link.
3. In the full course, open the Day passes tab.
4. In Days sold separately , pick the days you already created. You can also use Create new to add a day right there.
5. Check the preview “How they'll look on the event page”: it shows the cards and compares the price of separate days against the combo.
6. Press Save .

The New York combo with its two days. Below: “All days separately: USD 1,900 · this package: USD 1,500”.

How your visitors see it

On the full-course page the “Day 1” and “Day 2” cards appear, each with its buy button, plus the “Book the full course” button.

Rules Beytrax looks after for you

- Cards are sorted by date on their own.
- Only published days show. Sold-out or past days show, but can't be bought.

- Days also appear separately on the Events page. On the home page only the full course appears, to avoid repetition.
- At the door, the full-course ticket works both days, and the full-course door also accepts each day's tickets (chapter 10).

CHAPTER 10

QR tickets and the door

At paid in-person events, each spot bought gets a QR code by email, and it's checked at the door with a phone.

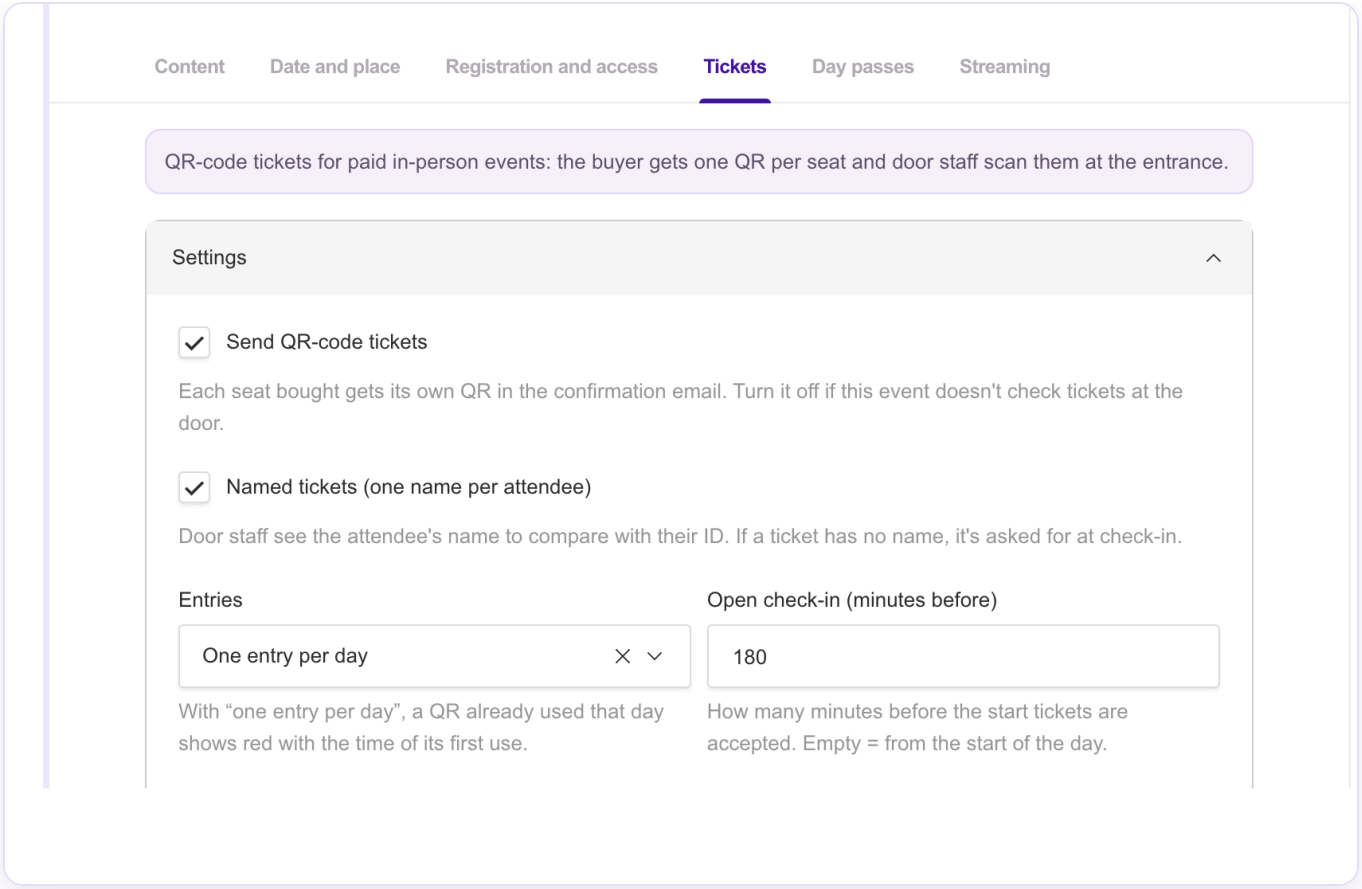

👧 **IN PLAIN WORDS**

A QR ticket is like an amusement-park wristband: each person has their own, with their name. At the entrance, someone checks it with a phone: green means go ahead; red means something's off.

1. Set up the tickets (once per event)

Open the event and go to the Tickets tab. Under Settings :

- Send tickets with QR code : on by default. Each spot bought gets its own QR in the confirmation email. If someone buys 2 spots, they get 2 QRs.
- Named ticket (name per attendee) : each ticket carries the name of who will enter. At the door, staff compare that name with the ID. It's already on for Dietrich Klinghardt's events.
- Entries : One entry per day (if someone tries to enter twice the same day, it shows red) or Allow leaving and coming back .
- Open check-in (minutes before) : from when tickets are accepted. 180 means 3 hours before the start.

The ticket settings of the New York course.

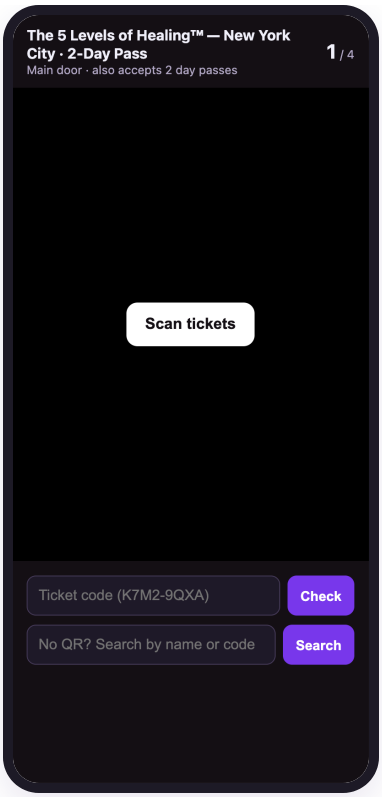

2. On event day: set up the door

1. Open the event Tickets tab Scan at the door section.
2. Type the name of the door or the person checking, for example “Main door” or “Laura”.
3. Choose how long the link works and press Create link . It stops working when the event ends.
4. A link and a QR appear. Send it to the door person, or have them scan that QR with their phone. No username or password needed, and the link only works for this event.

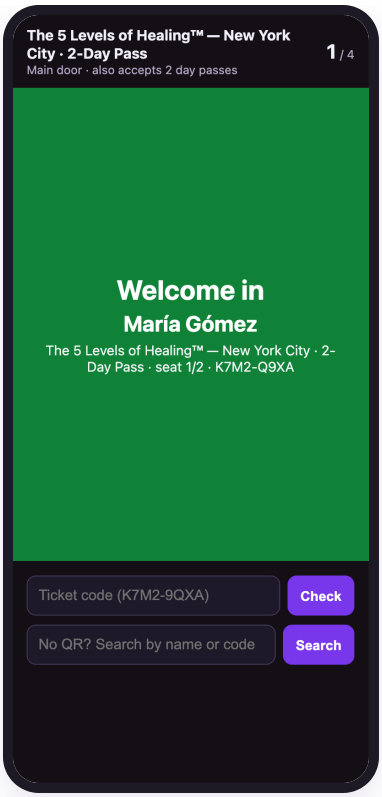

> 💡 TIP
>
> Create a separate link for each door or person. If someone loses their phone, press Revoke on their link only and the rest keep working.

3. Checking tickets with a phone

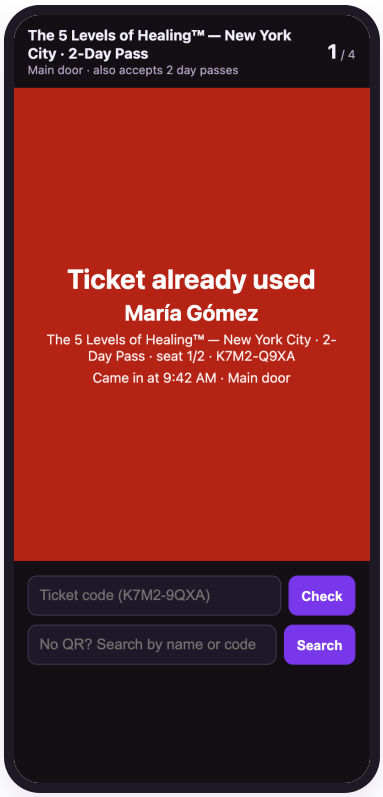

The door person opens their link, presses Scan tickets and points the camera at each attendee's QR. The screen turns a color:

Ready to scan. At the top: how many have entered out of how many.

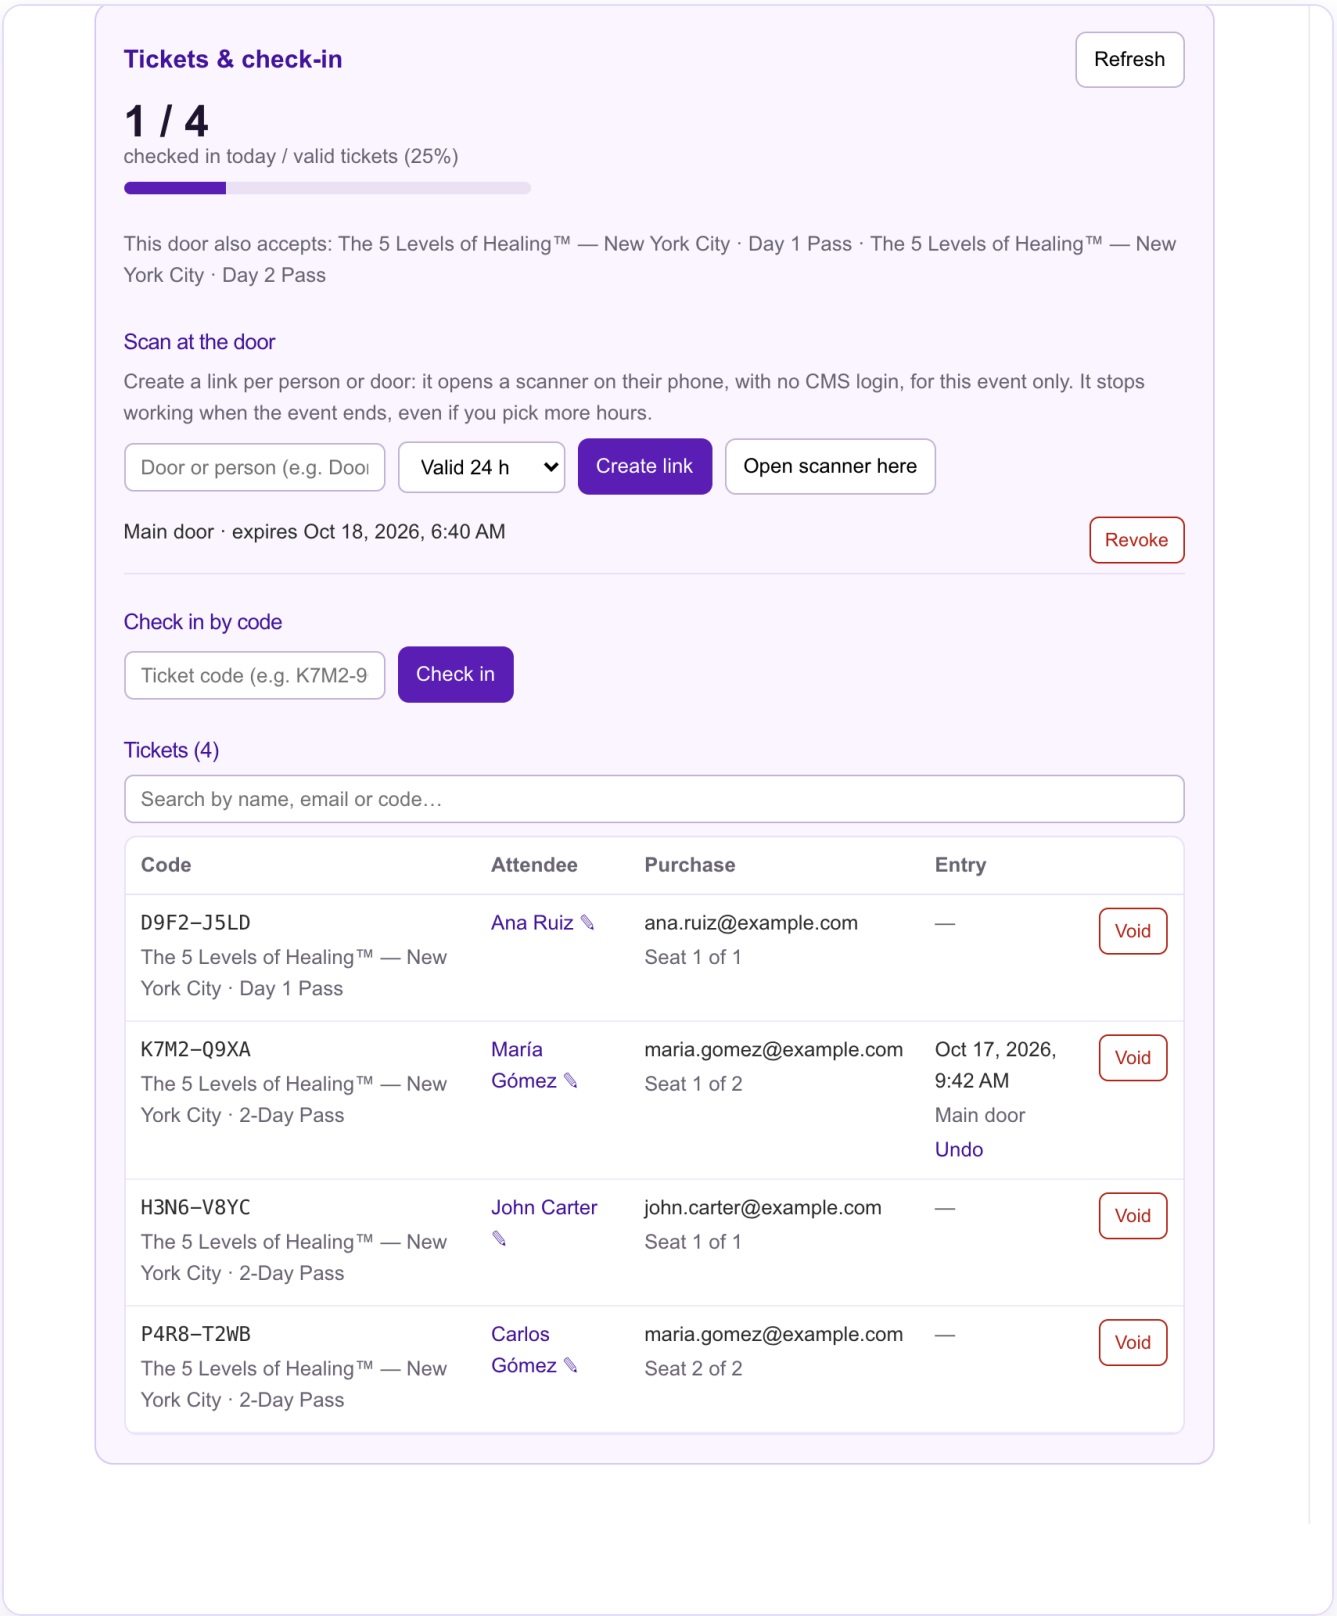

Green: “Go ahead”. Compare the name with their ID.

Red: “Ticket already used”. Shows what time and which door they came in.

The screen says…	What do I do?
Go ahead (green)	Check that the name matches their ID and let them in.
Ticket already used (red)	Don't let them in yet. That QR already came in today. Call the person in charge.
Not open yet	They arrived before check-in opened. Ask them to wait a little.
Doesn't have their QR	Type at least 3 letters of their name, or their code, in ¿Sin QR? (No QR?) and press Buscar (Search). With the code (like K7M2-Q9XA) you can also press Validar (Check).

4. From the computer

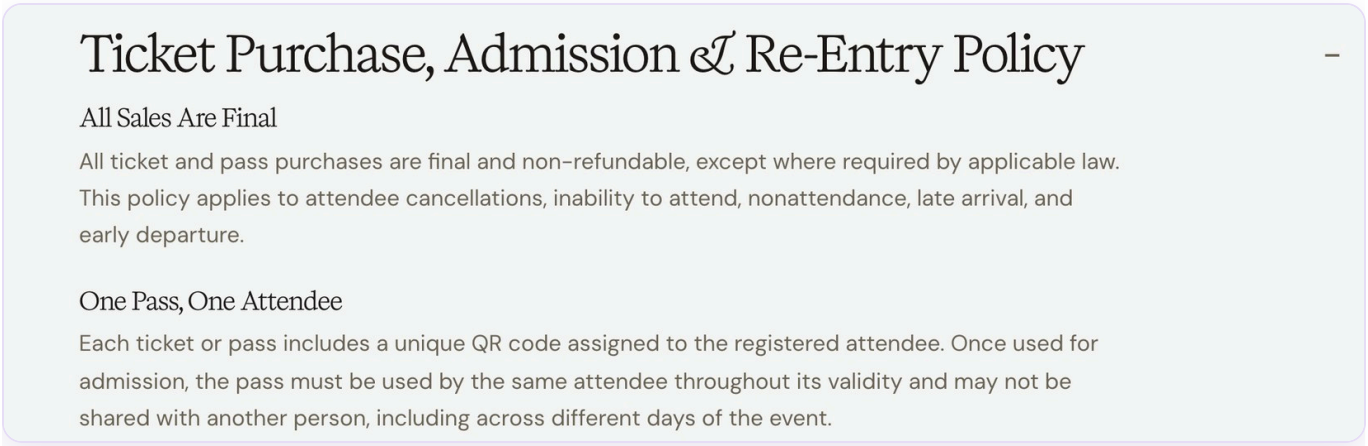

The “Tickets and check-in” panel: how many came in today, the door links and the ticket list (with sample names).

In the Tickets and check-in panel you see live how many people have entered (for example, 1 / 4 entered today) and the list of all tickets. There you can:

- Press the pencil to fix an attendee's name.
- Undo an entry recorded by mistake.
- Void a ticket that is no longer valid.
- Open scanner here to check tickets with the computer's camera, or Register entry by code by typing the code.
- Use the search box to find someone by name, email or code.

> ⭐ REMEMBER
>
> If you refund a purchase in full in Stripe, its tickets are voided on their own. You don't need to do anything else in Beytrax.

On the site, the purchase policy appears next to the buy button so the buyer reads it before paying.

PART 4

Live and members

The Weekly Talks step by step, the chat, memberships and the Archive only members see.

Weekly Talks **OBS** **Live chat** Memberships Archive

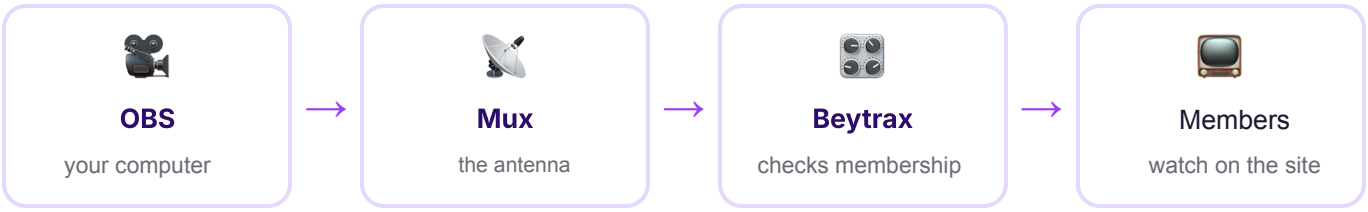

CHAPTER 11

Live Weekly Talks

How to stream one of Dr. Klinghardt's talks live, from start to finish.

IN PLAIN WORDS

Streaming live is like having your own TV channel. OBS is the camera. Mux is the antenna that sends the signal to everyone. And Beytrax is the remote control: it decides who can watch, and when the channel turns on and off.

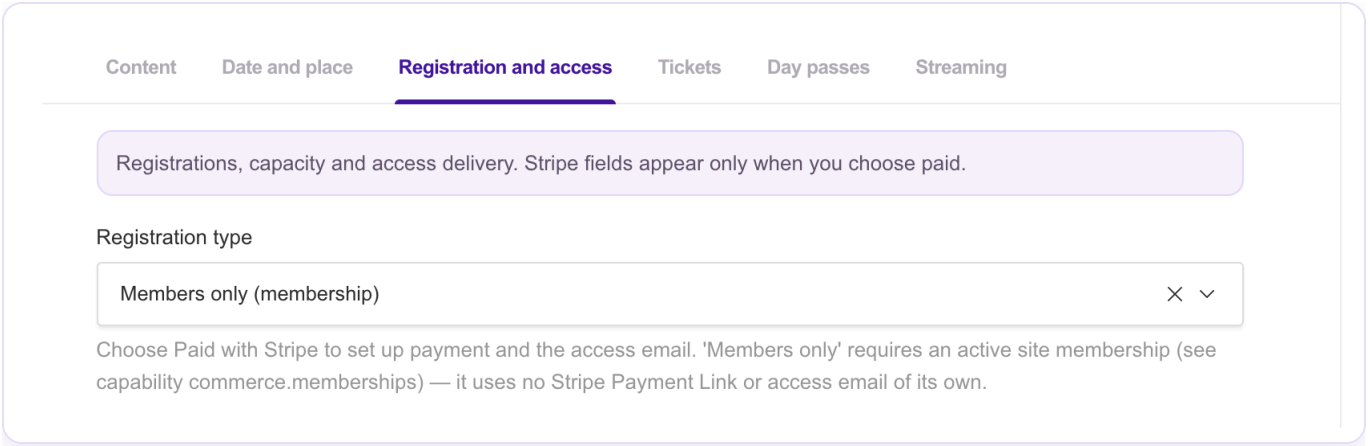

Who can watch each talk?

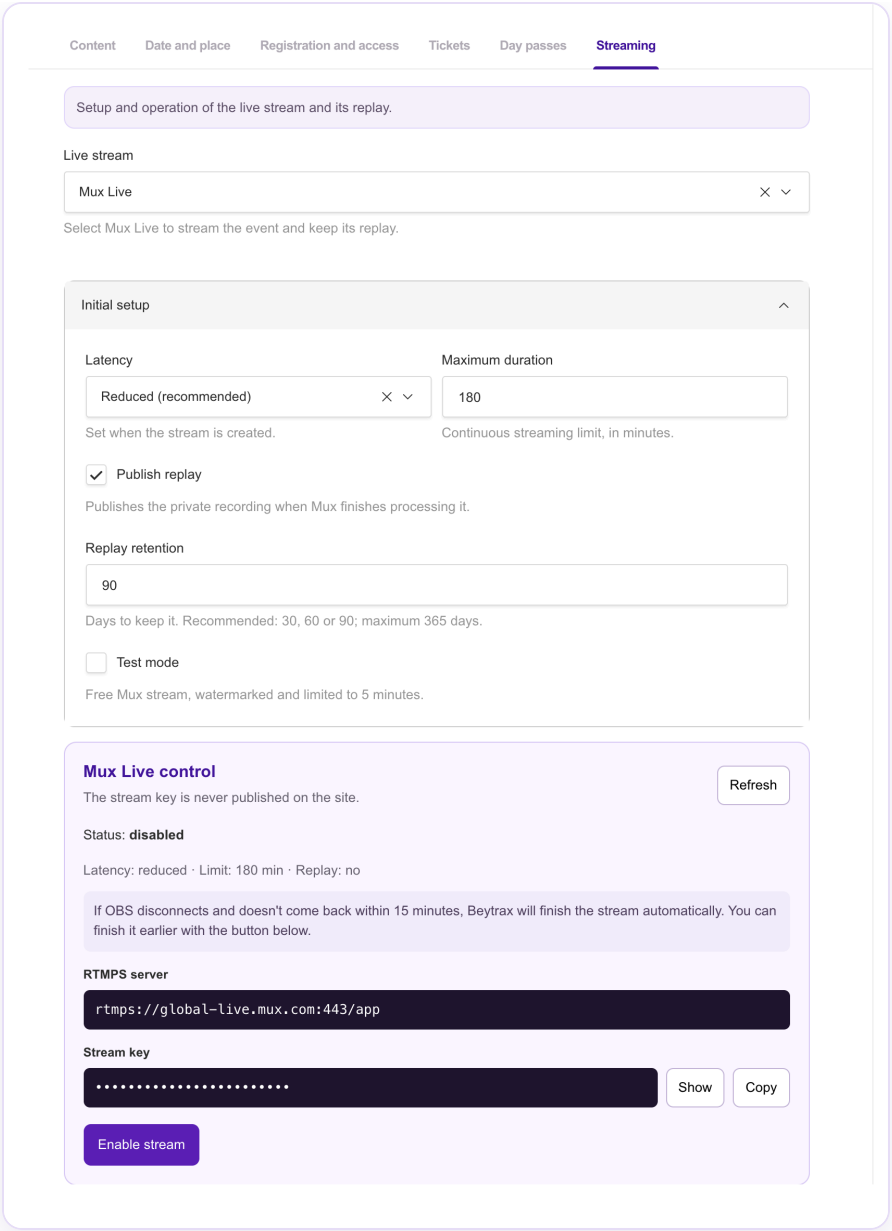

- Free Weekly Talks: a No charge event. Anyone can watch it.
- Private Weekly Talk: a Members only (membership) event. Only people with an active membership see it.

Part A · Prepare the event (just once)

1. Open the event (for example, Private Weekly Talk). In Registration and access make sure it says **Members only (membership) .**
2. In the Broadcast tab, under Live stream , choose Mux Live .
3. Check the Initial settings : Latency on Reduced (recommended) and Maximum duration in minutes (180 is 3 hours).
4. If the Create private stream button appears in Mux Live control , press it once.
   That creates your “channel”.

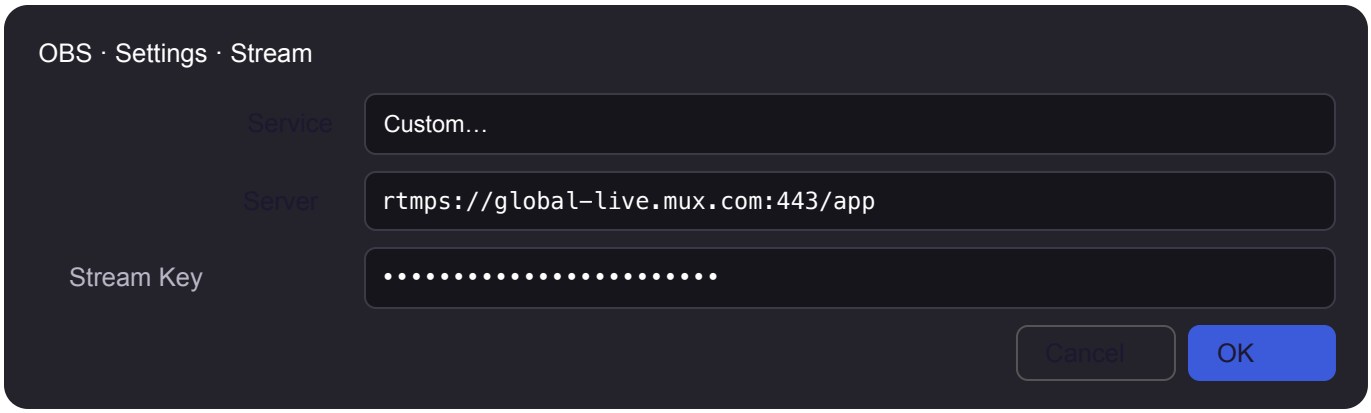

The Private Weekly Talk is marked “Members only (membership)”.

The Broadcast tab: settings at the top; below, the Mux Live control with the server, the key and the “Enable stream” button.

Part B · Connect OBS (just once)

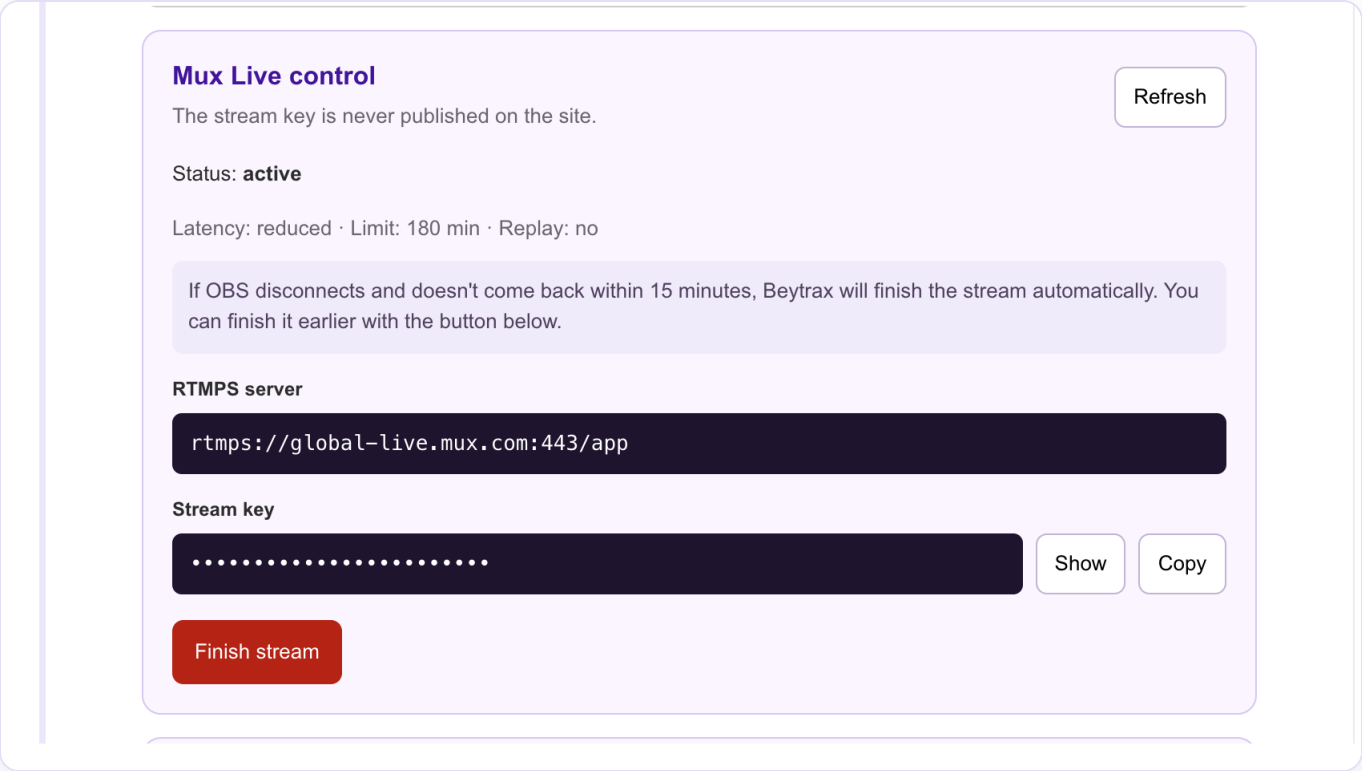

1. In Mux Live control , copy the RTMPS server (rtmps://global-live.mux.com:443/app).
2. In OBS, open Settings Stream. Under Service choose Custom and paste the server into Server.
3. Go back to Beytrax and press Copy next to Stream key.
4. In OBS, paste it into Stream Key and press OK. OBS remembers this for good.

> ⚠ HEADS UP: THE STREAM KEY IS YOUR HOUSE KEY
>
> Whoever has that key can stream as if they were Dr. Klinghardt. Never send it by chat or email, never screenshot it and use Show only if you really need to see it. The safest is to always use the Copy button and paste it straight into OBS.

Part C · Every week, on Talk day

1. Half an hour before, open the event. If you reuse the same event every week, change the date and time in Date and place and press Save .
2. If you want the new talk to start with a clean chat, empty it (chapter 12).
3. In the Broadcast tab, press Enable stream . The status changes to idle : the channel is on and waiting for a signal.
4. In OBS, press Start Streaming.
5. After a few seconds, press Refresh in Beytrax: the status says active . You're on air! Live Now appears on the site.
6. When the talk ends, press Stop Streaming in OBS and then Finish stream in Beytrax.
7. The recording is saved to the Archive for members on its own. You don't need to do anything else.

On air: the status says “active” and the red “Finish stream” button appears.

The stream statuses

`disabled`	Off. You haven't enabled it yet, or it already ended.
`idle`	On and waiting for OBS to send the signal.
`active`	On air! Members are watching you.
`completed`	Finished. The recording is on its way to the Archive.

What your members see on the site

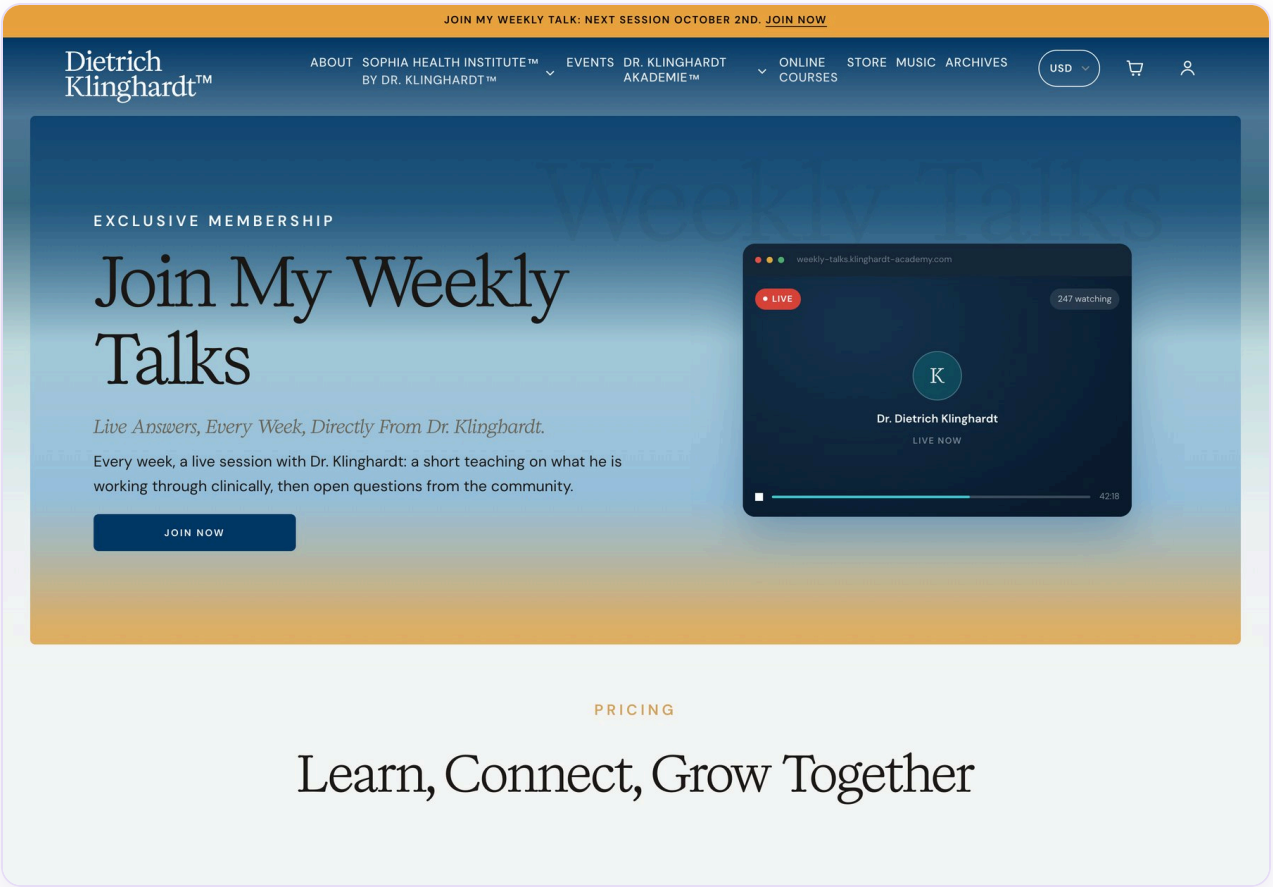

- Before start time: the Next live talk band announces the next talk, labeled Free or Members.
- **Between the start time and your signal arriving: Starting shortly appears. If you start 5 minutes late, that's what they see for those 5 minutes.**
- When the signal arrives: Live Now and the live video.
- If the internet drops for a moment: they see Reconnecting… while OBS reconnects.
- If the talk runs long: Live Now stays until you end it.
- If you finish early: the notice stays until the scheduled end time and then goes away.
- When it ends: the live page doesn't show the replay. The recording appears in Archives, only for members with a monthly or yearly membership.

TIP: REHEARSE THE DAY BEFORE

In Initial settings there is Test mode : a free stream, with a watermark and 5 minutes max. Use it to practice without nerves. Before the real Talk, untick it.

REMEMBER

If OBS disconnects and doesn't come back within a few minutes (the panel tells you how many), Beytrax ends the stream on its own. If you forget to press Finish, nothing bad happens.

The site's Weekly Talks page, with the membership plans.

CHAPTER 12

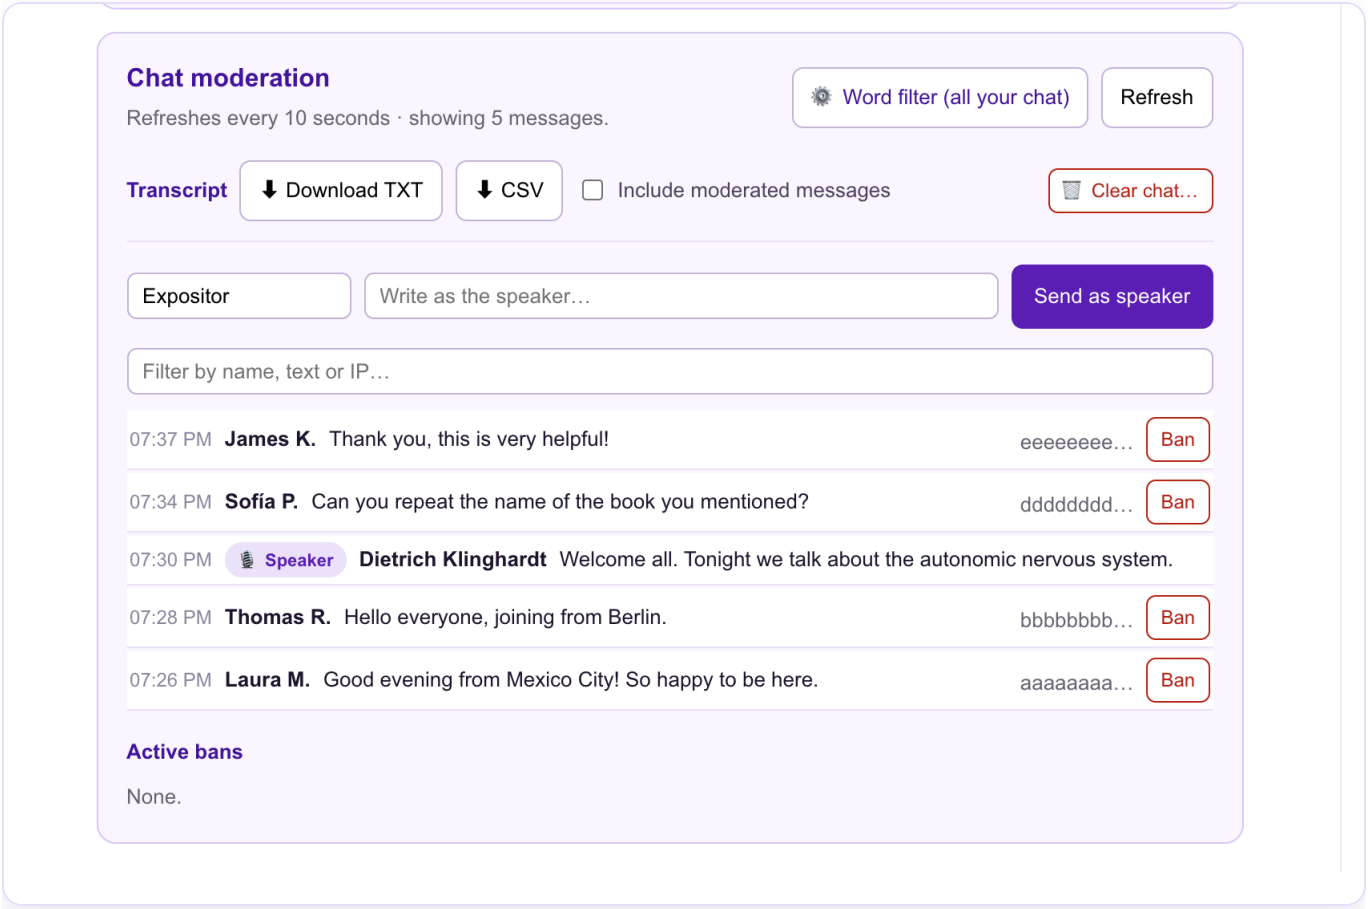

The live chat

During the Weekly Talk, members post questions and greetings in the chat. You look after it from the panel.

IN PLAIN WORDS

The chat is like a classroom: everyone can raise their hand and you are the teacher making sure everyone behaves. If someone misbehaves, you can send them out of the room.

You'll find it in the event Broadcast tab Chat moderation . It refreshes every 10 seconds on its own.

Chat moderation during a talk: messages, presenter and ban buttons.

What you can do

Button	What it's for
Ban	Removes that person from this event's chat. Their messages stop showing. In Active bans you can forgive them with **Lift ban .**
Word filter (all your chats)	A list of banned words that applies to all your chats. Messages with those words aren't published.
Send as presenter	Writes a message with the Presenter label. You can change the name shown, for example “Dr. Klinghardt Team”.
Search	Filter by name, text or IP… to find a message.

Saving the conversation

In Transcript you can download the whole chat:

- Download TXT : a text file with one line per message, like this: `[14/10/26 07:05 PM] [Laura M.] [Good evening from Mexico City!]`
- CSV : the same content to open in Excel or Google Sheets.
- Include moderated messages : tick this if you also want the hidden messages.

Emptying the chat

If you reuse the same event every week, it's best to start each talk with a clean chat. Press Empty chat… . Before deleting, the panel offers Download the transcript (TXT) before emptying .

⚠ HEADS UP

Emptying the chat deletes all of that event's messages and can't be undone. If the stream is live, connected attendees will see it empty. Download the TXT first if you want to keep it.

CHAPTER 13

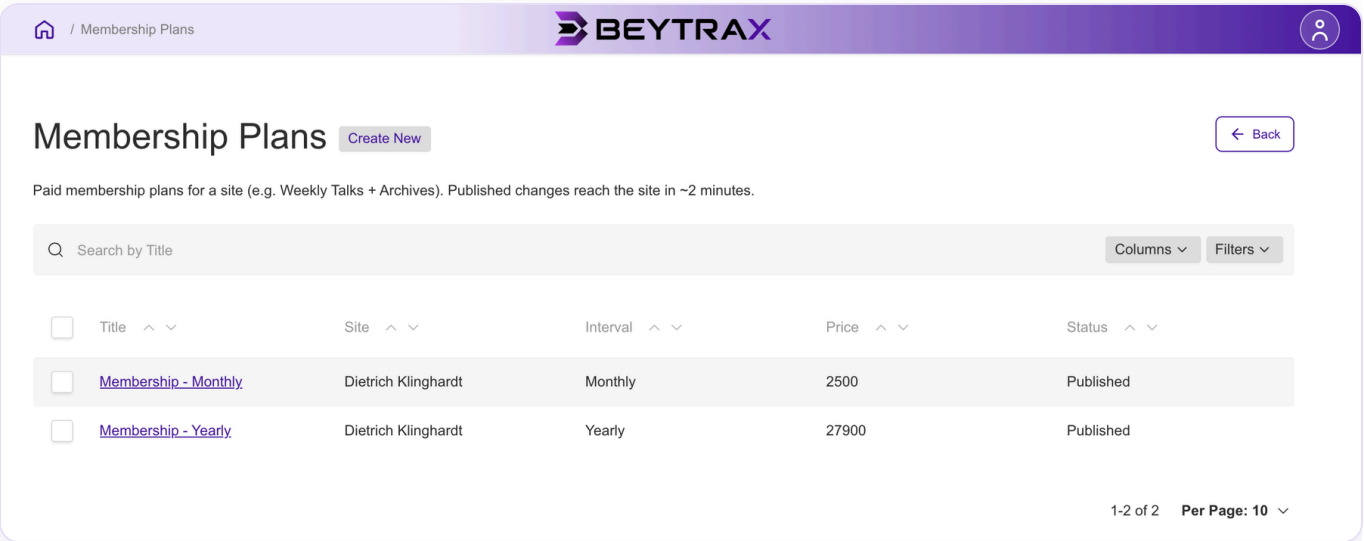

Memberships

Membership is what opens the door to the private Weekly Talks and the Archive.

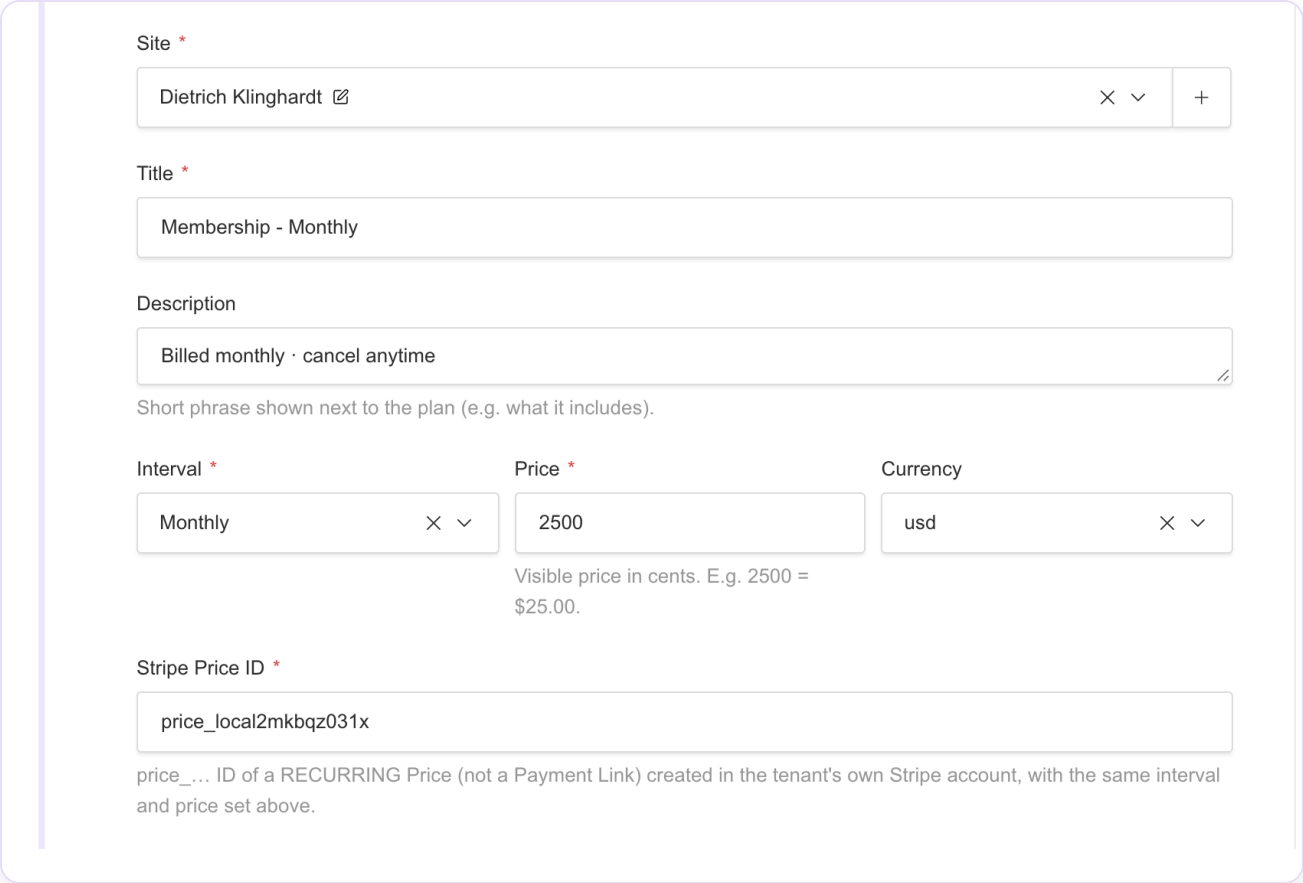

IN PLAIN WORDS

A membership is like a club card. It's paid every month or every year, and while it's valid the person can attend the private talks and the club library. If they stop paying, the card switches off on its own.

Your two plans

Membership Monthly ($25 a month, typed 2500) and Membership Yearly ($279 a year, typed 27900).

Inside a plan.

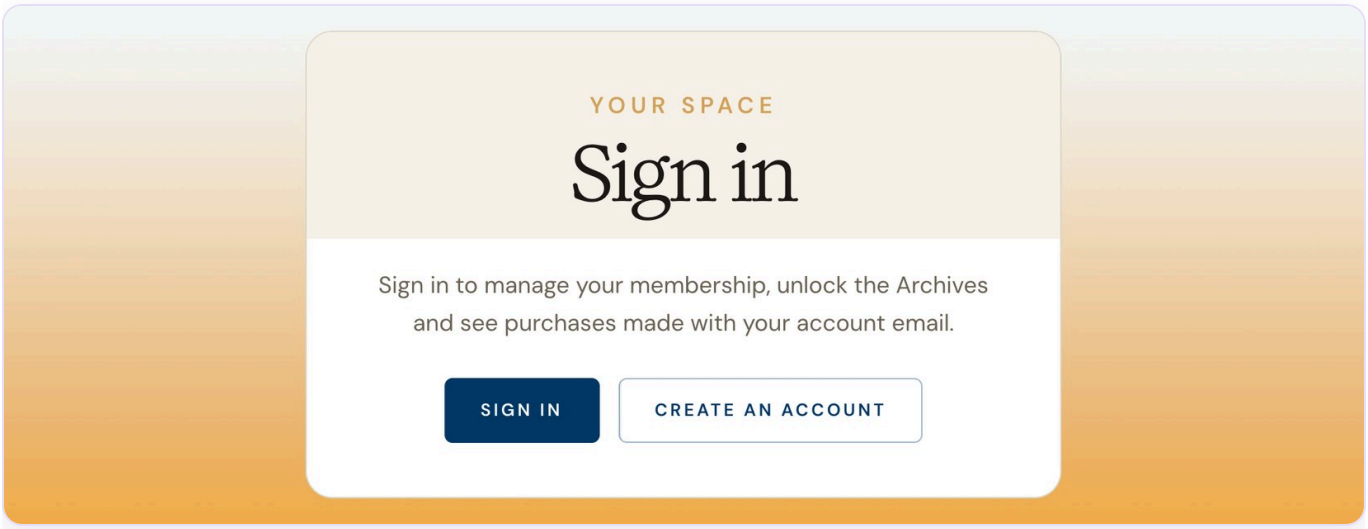

- Title and Description: the plan's name and a short sentence of what it includes.
- Interval: Monthly or Yearly .
- Price: in cents, the one shown on the site.
- Stripe Price ID: the price_… code of a recurring price in your Stripe account, with the same interval and price.

> ⚠ HEADS UP IF YOU CHANGE A PRICE
>
> First create the new price in Stripe, then paste the new price_… here and change the displayed Price. Both must match. If in doubt, do it with Rodrigo the first time: it's one of the few things worth checking in pairs.

What happens on its own

- Your visitors pick the currency at the top of the site (USD , MXN or EUR) and see prices converted at the day's exchange rate.
- When someone pays, their membership activates on its own. When they cancel or stop paying, it switches off on its own.

- Each member manages their membership (change card, cancel) from My Account on the site. You don't have to do anything.
- You see the list of members and their payments in your Stripe account, under Subscriptions.

My Account: here members sign in to see their membership, the Archive and their purchases.

CHAPTER 14

The Archive (Archives)

Dr. Klinghardt's private library: recordings, diagrams, PDFs and videos for members.

IN PLAIN WORDS

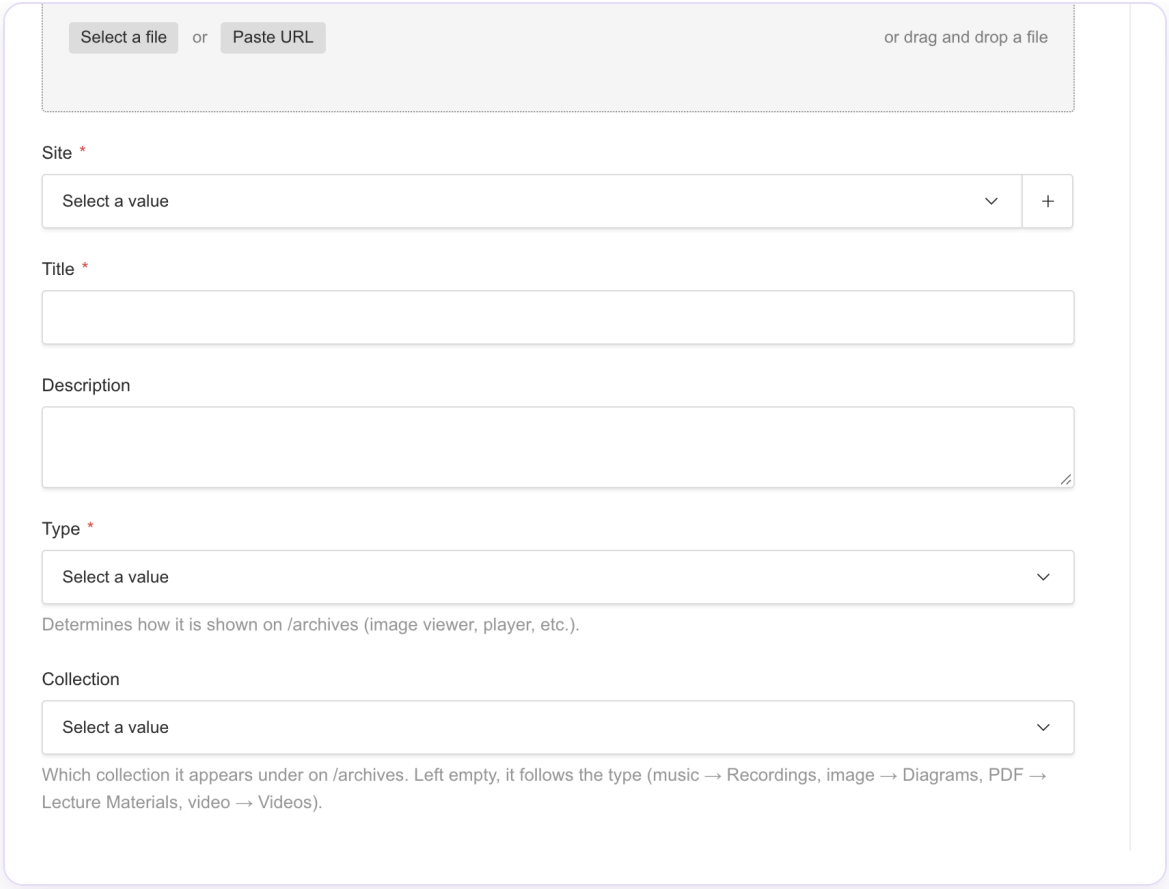

The Archive is the club's secret library. Only members with their card get in. Weekly Talk recordings land on the shelves on their own, and you can add more treasures whenever you like.

What arrives on its own

Every time you finish a Weekly Talk, the recording is saved in secure storage and appears in Archives for members. You don't have to upload anything.

Adding something by hand

1. Go to Archive and press Create . For many files, use Bulk upload .
2. Drag the file in, pick it with Select a file or paste a link with Paste URL .
3. Choose the Site, type a Title and, if you like, a Description.
4. In Type choose what it is (image, PDF, music or video). That tells the site whether to show an image viewer, a reader or a player.
5. In Collection choose the shelf. If you leave it empty, it sorts itself: music in Recordings, images in Diagrams, PDFs in Lecture material and videos in Videos.
6. Change the Status from Draft to Published and press Save .

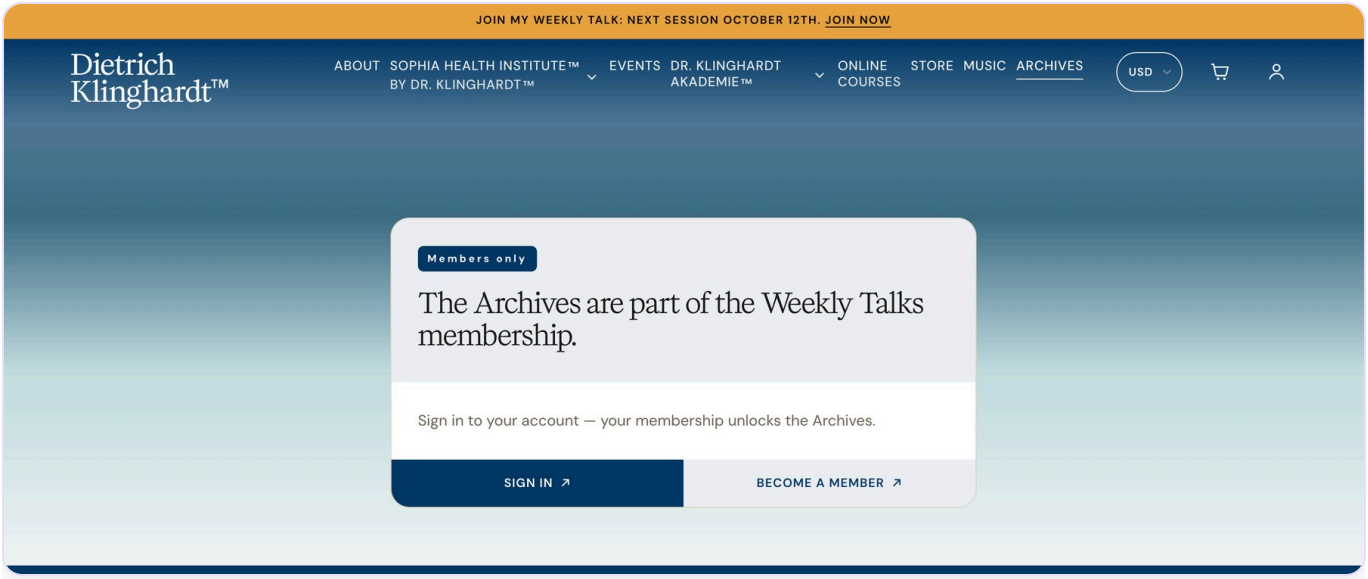

Adding a new treasure to the Archive.

Who can get in?

Only members with an active membership (monthly or yearly) who are signed in. They see the whole Archive: the introduction, the six collections and all the content.

Everyone else only sees an invitation: if they aren't signed in, with the buttons
Sign in and Become a member ; if they are signed in but their membership isn't active, it explains why and takes them to choose a plan.

What a non-member sees in Archives: only the invitation to sign in or become a member.

PART 5

Sell and communicate

The store, QR codes to print, the newsletter and the foundation's donations.

Store | **QR codes** | **Newsletter** | Donations

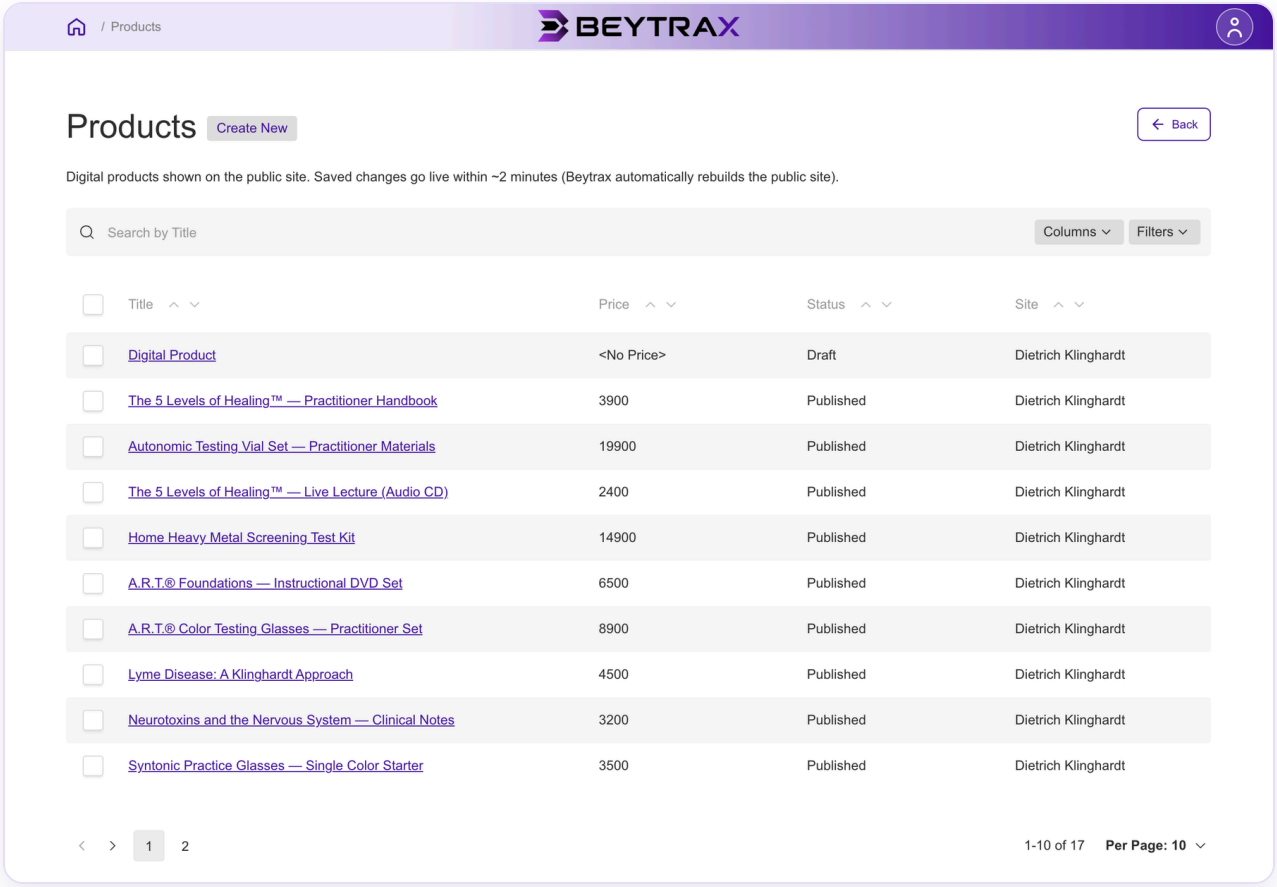

CHAPTER 15

The store

Books, color glasses, kits, DVDs and audio: everything lives in Products .

IN PLAIN WORDS

The store is like a market stall. Each product has its label with a photo and price, and its own little cash box: the Stripe link.

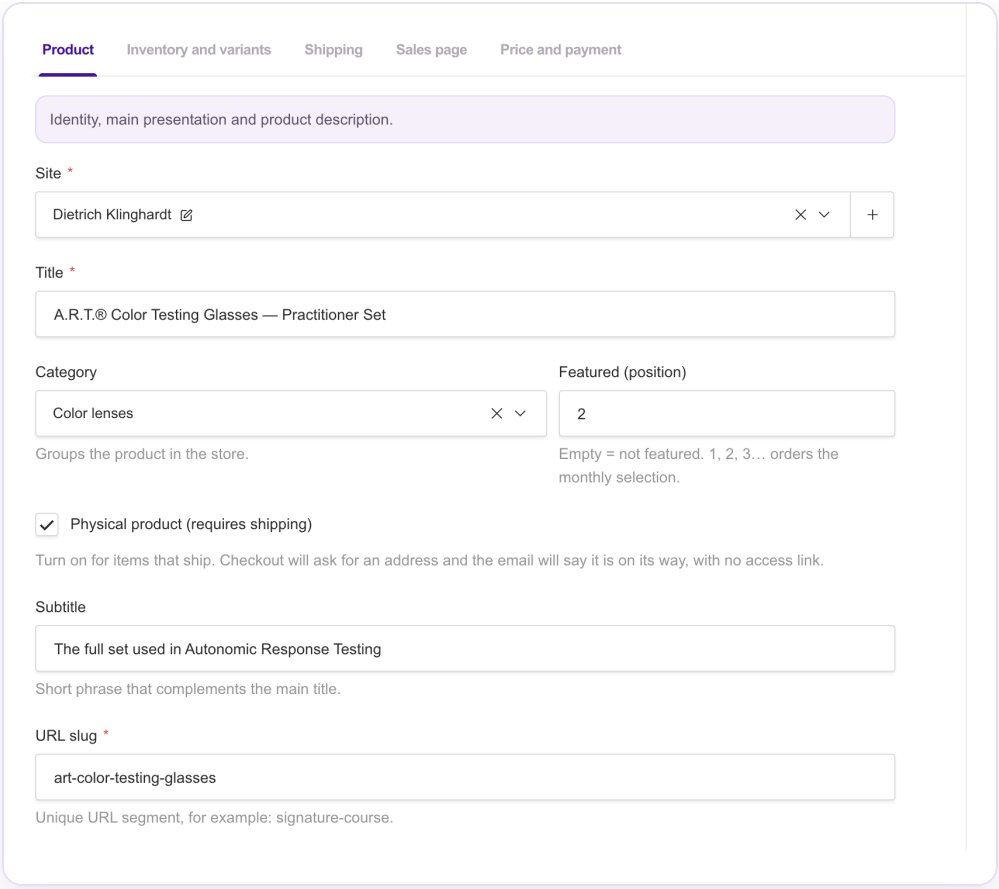

The list of products in the store.

The five tabs of a product

1 · Product

Title, category, subtitle, main photo, gallery, video and description. Two special things:

- Physical product (requires shipping) : turn it on for things sent by courier. Checkout will ask for the address and the email will say it's on its way. If it's off, it's digital: the email carries the access.
- Featured (position) : enter 1 , 2 , 3 , 4 or 5 so it shows in Dr. Klinghardt's Top 5, Picks of the Month. Empty = not featured.

The A.R.T. color glasses, a physical product.

2 · Inventoryandvariants

SKU (your internal code), Track inventory and how many units there are, and This product has variants if it's sold in different versions (for example, color or size).

3 · Shipping

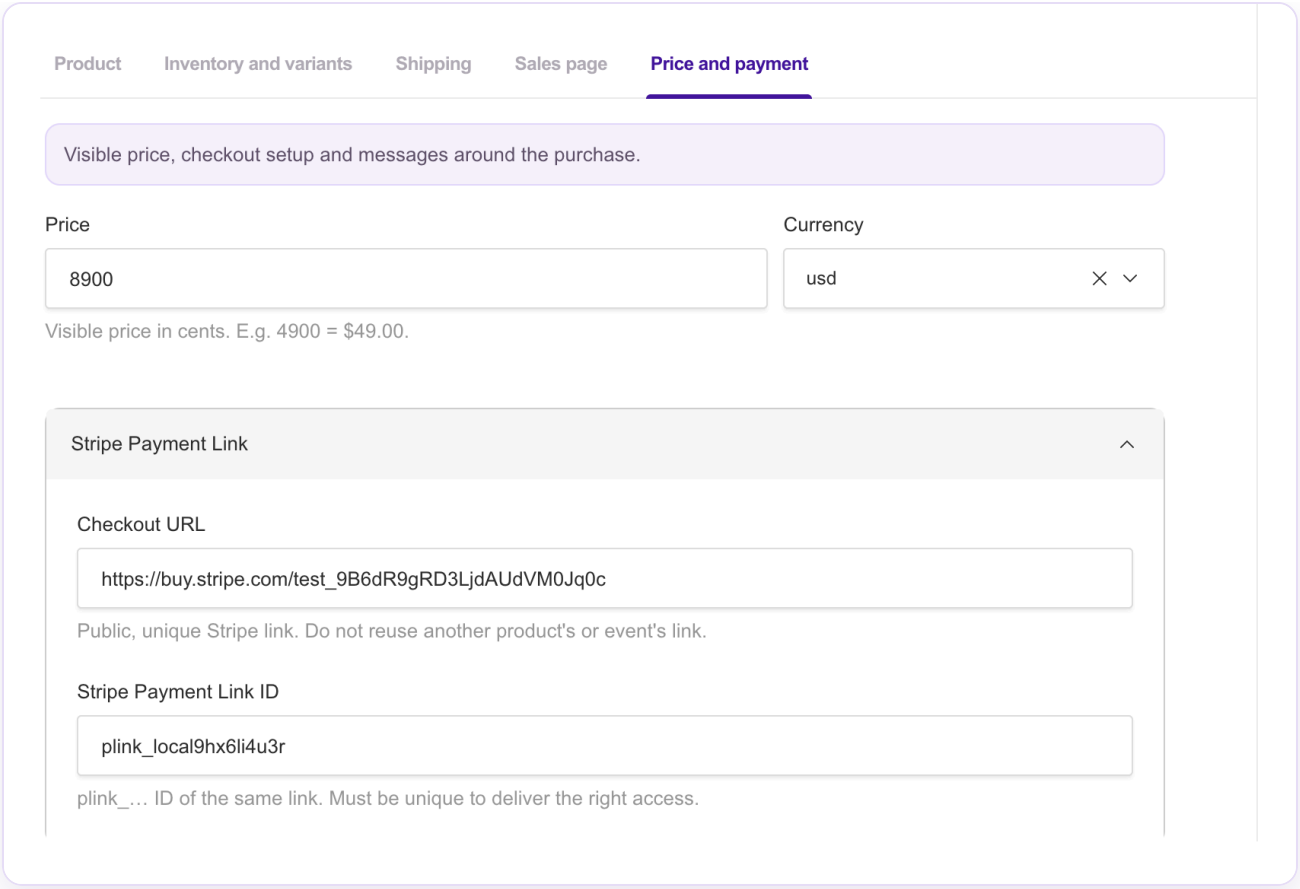

Weight, Shipping cost (in cents; 0 or empty means free shipping), estimated delivery, where it ships and the return policy.

4 · Salespage

The product's benefits, sections and FAQs, to win the visitor over.

5 · Priceandpayment

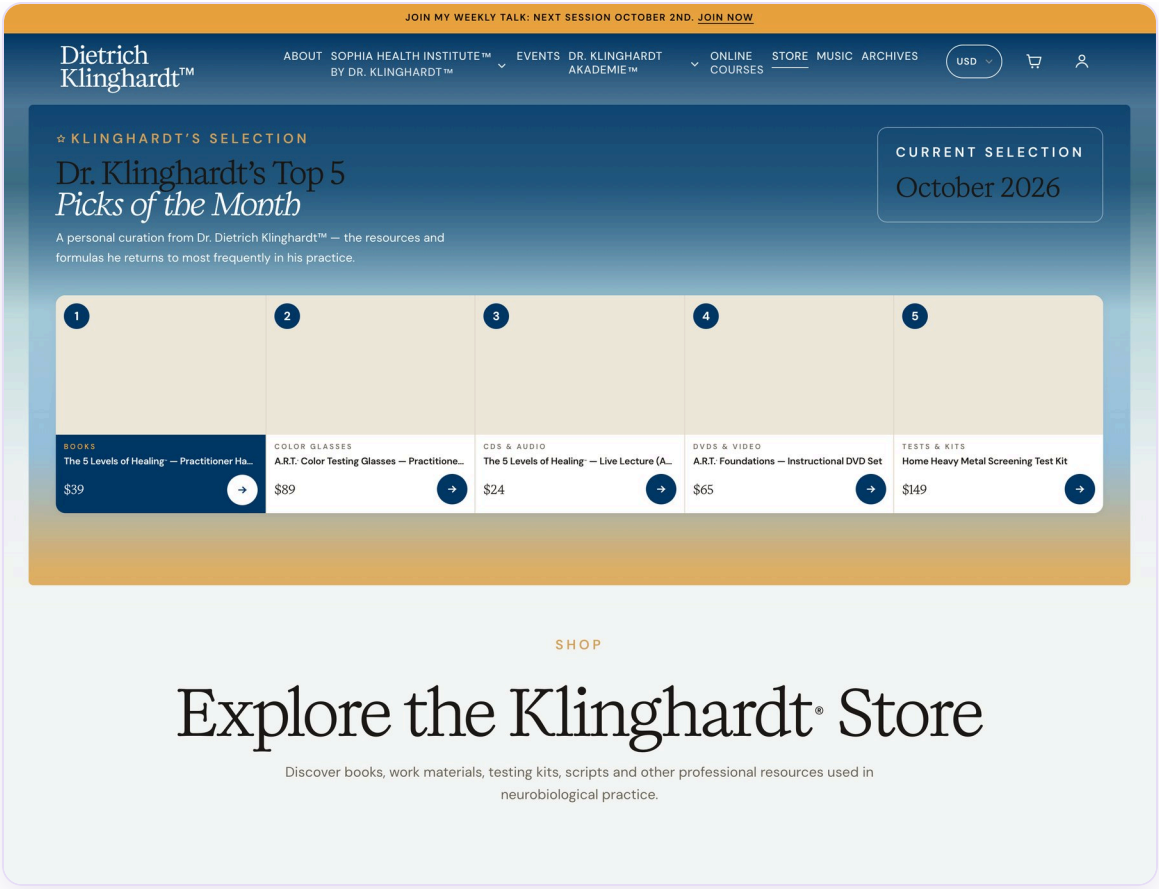

Price (in cents), Checkout URL and Stripe Payment Link ID , just like events (chapter 8). You can also write a message next to the buy button and another for after the purchase.

Price and payment: each product with its own Stripe link.

💡 TIP

You see the shipping addresses of physical products in Stripe, inside each payment. From there you know where to send the package.

The store on the site, with the Top 5 of the month.

CHAPTER 16

QR codes to print

For flyers, signs, posters or products: a little square people scan with their phone.

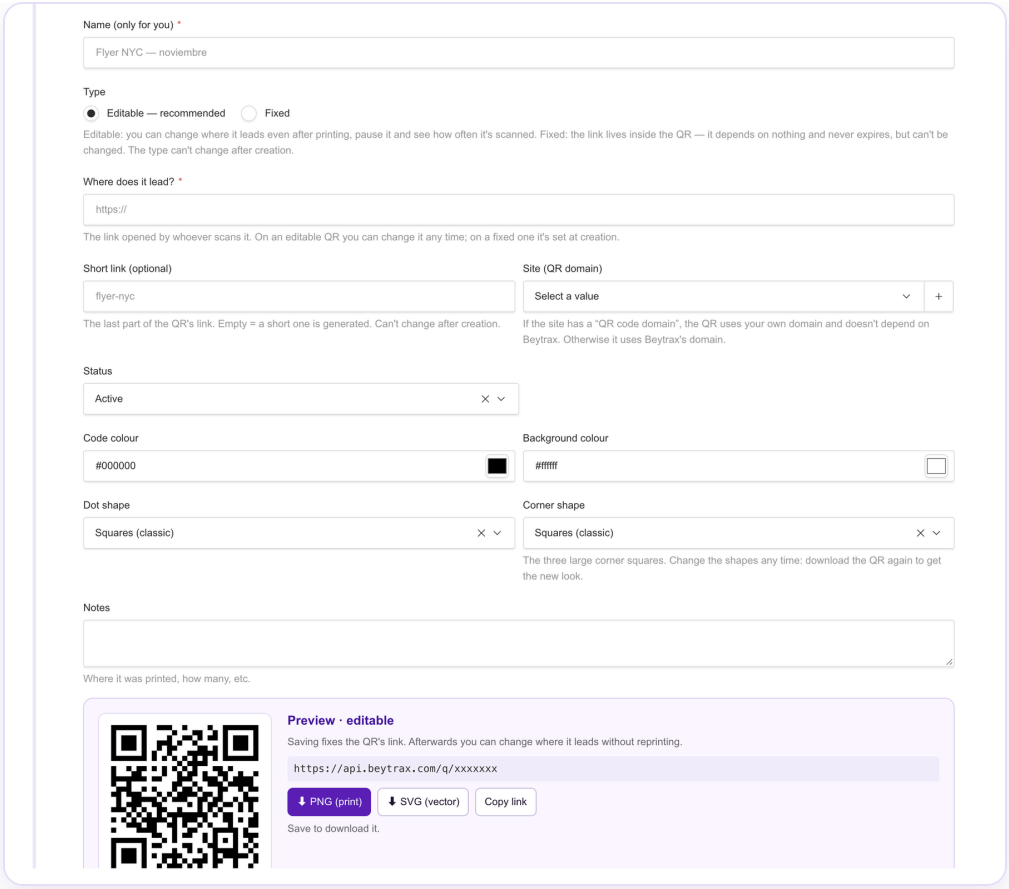

👱 **IN PLAIN WORDS**

A QR is a printed magic door: people point their phone at it and land on your page. There are two kinds:

- Editable (recommended): like a sign with an arrow you can turn. Once printed, you can change where it leads, pause it and see how many people scanned it.
- Fixed: like a tattoo. It never changes and depends on nothing, but if you made a mistake you have to reprint.

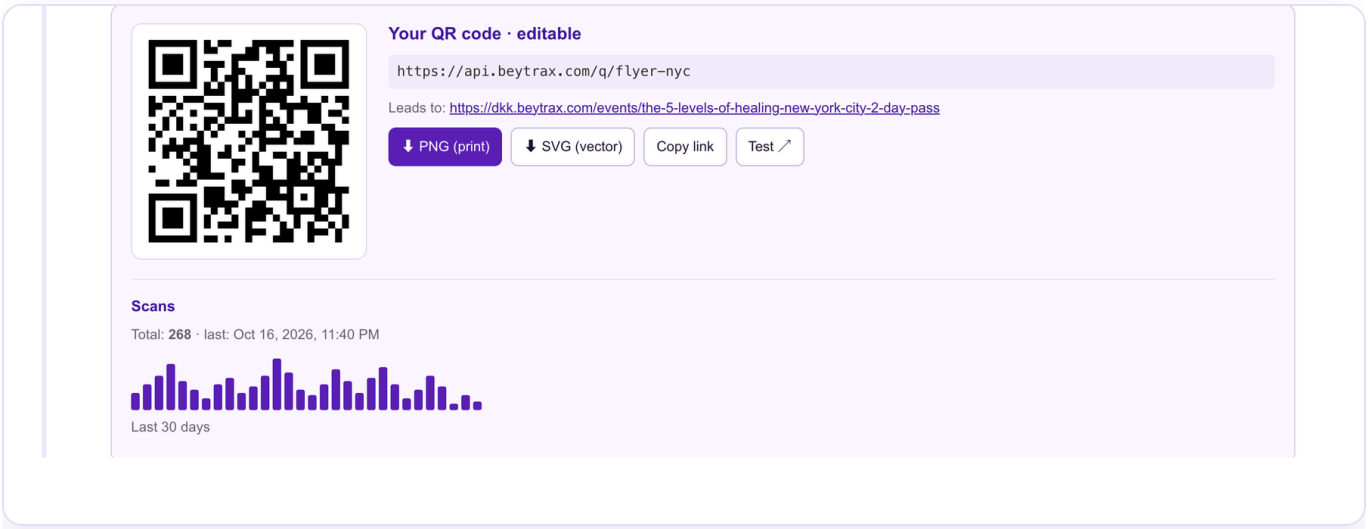

Creating a QR

1. Go to QR codes and press Create .
2. Name (just for you): something to help you remember, for example “NYC flyer, November”.
3. Type: keep the Editable option, the recommended one.
4. Where does it lead?: paste the page's full link, starting with https:// .
5. Short link (optional): an easy word, for example flyer-nyc . If you leave it empty, one is made up.
6. Choose the Site, the colors (with the picker) and the shape of the dots and corners.
7. Press Save .

Creating a QR. Below you see how it's coming along.

Downloading and printing it

The New York flyer QR, saved, with its scans from the last 30 days.

- ⬇PNG (print) : a large image, ready for the printer or your designs.
- ⬇SVG (vector) : designers' favorite format; it can be made the size of a building without getting blurry.

- Copy link and Test : to check it leads where you want.
- Scans: how many times it has been scanned in total, when the last one was and a chart of the last 30 days.

Changing where it leads (already printed)

Open the QR, change Where does it lead? and press Save . From then on, every printed QR leads to the new page. No reprinting!

Pausing a QR

Change the Status to Paused . If you like, fill in If paused, go to another page (for example, the home page). If you leave it empty, whoever scans it sees a notice that the code isn't active right now.

⚠ HEADS UP

- The type, short link and site can't be changed after creating the QR, because that's what gets printed.
- Use a dark code on a light background and check the preview; the panel warns you if it reads poorly.
- Before sending 500 flyers to print, scan it with your phone. Always!

CHAPTER 17

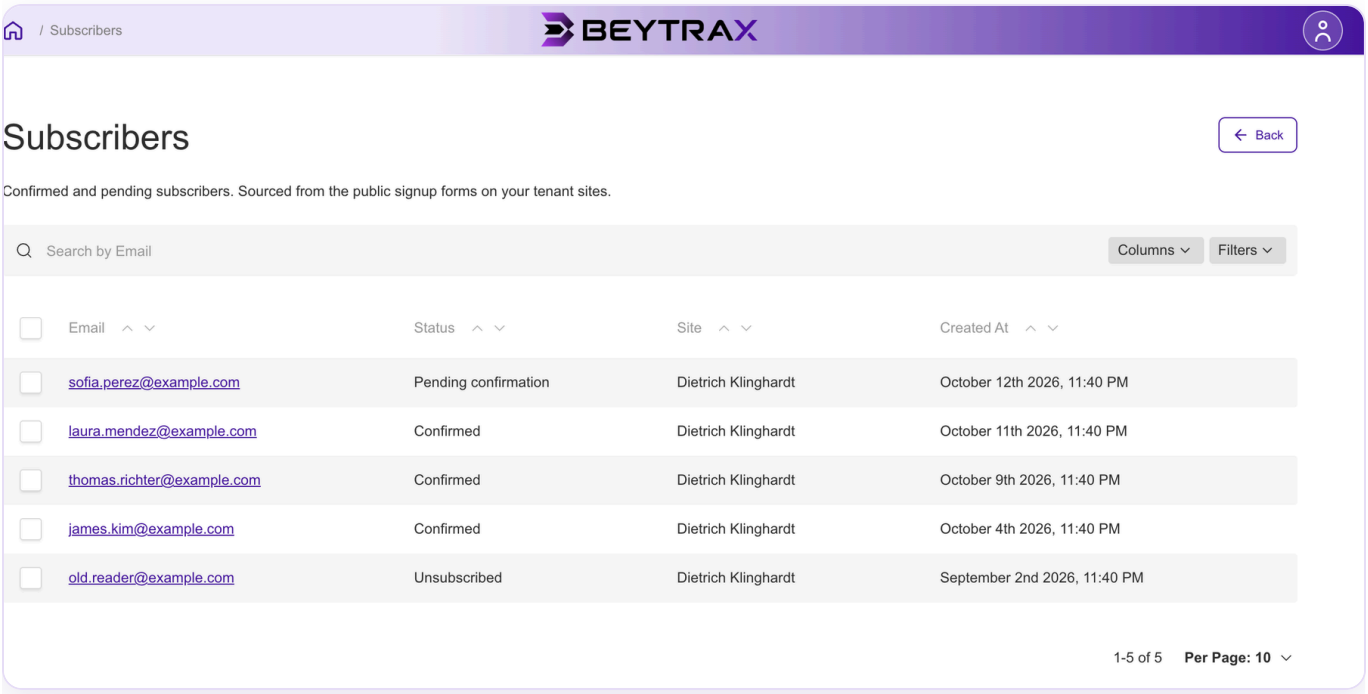

Newsletter and donations

People who want news from Dr. Klinghardt, and donations to the foundation.

Subscribers

When someone fills in the site's Join Our Newsletter form, they appear here. So nobody can subscribe someone else's email, they get an email to confirm:

Status	What it means
Pending confirmation	Subscribed, but hasn't clicked the confirmation email yet.
Confirmed	Confirmed. They're on your Mailchimp list and will get your newsletters.
Unsubscribed	Asked to stop receiving emails. Always respect it.

The subscriber list (with sample emails).

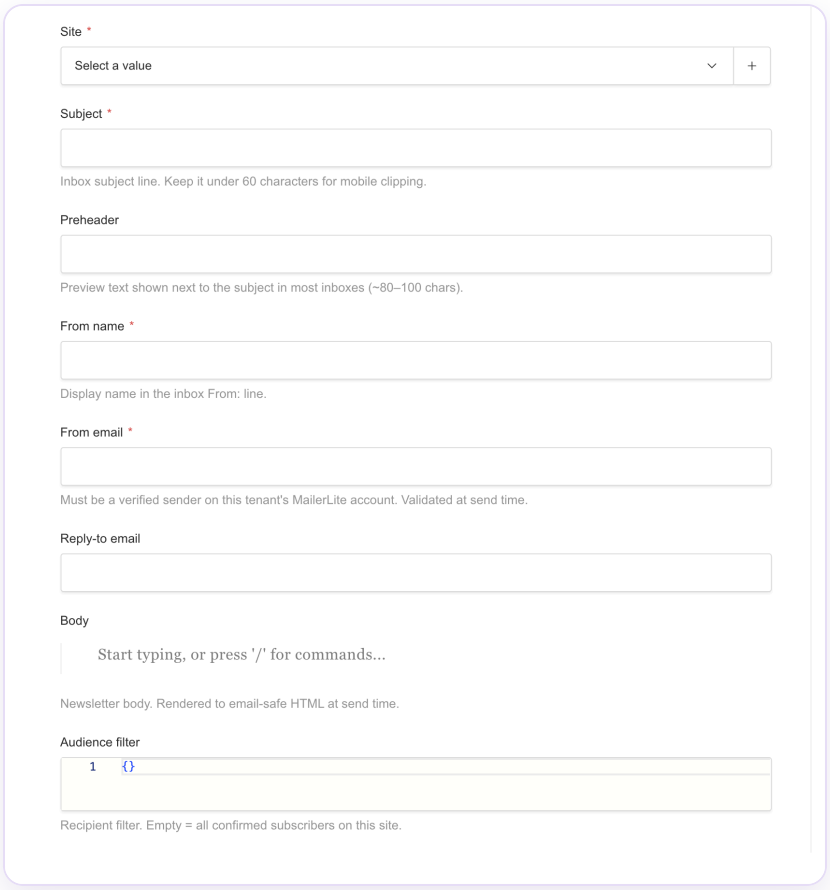

Confirmed subscribers are copied to your Mailchimp list on their own, the mail carrier that delivers your emails.

Newsletters

In Newsletters Create you can write an email to all your confirmed subscribers:

- Subject: under 60 characters, so it doesn't get cut off on phones.
- Preheader: the little gray phrase shown next to the subject in the inbox.
- Sender name and email: the email must be verified in your Mailchimp account.

- Body: the content of the email.
- Scheduled for: empty = sent as soon as you click; with a date = sent only that day.

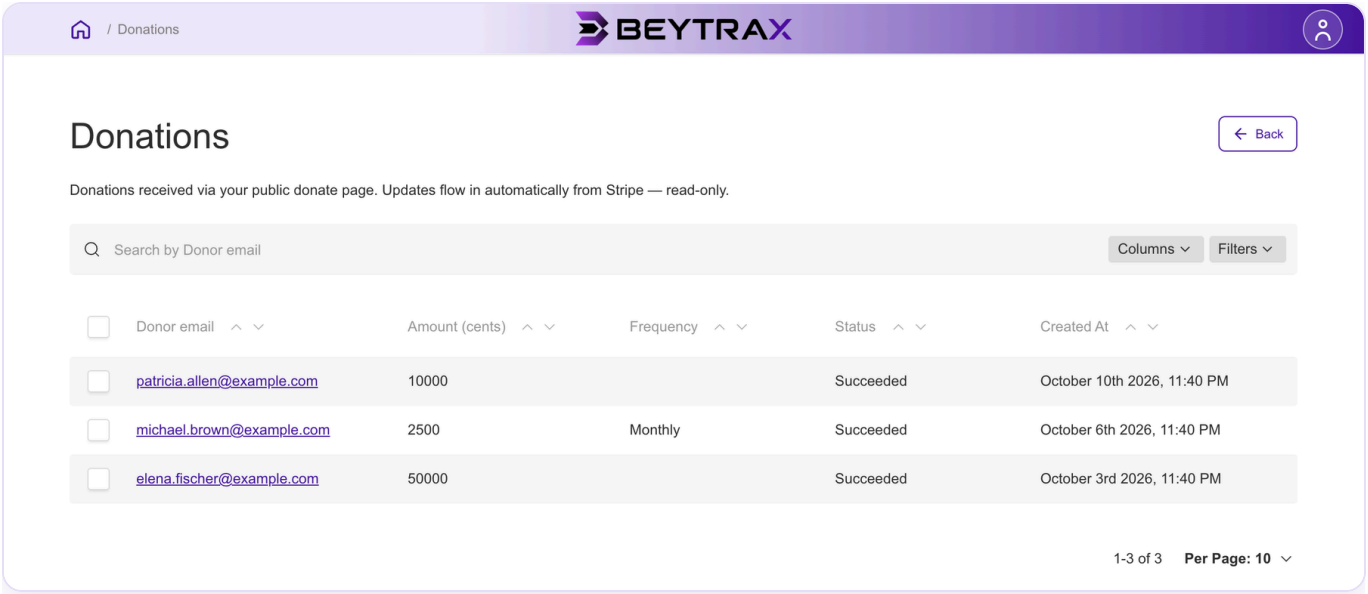

Writing a newsletter.

REMEMBER

The first time you send a newsletter from here, do it with Rodrigo. That way we check it looks perfect before it reaches your whole list. You can also keep sending campaigns directly from Mailchimp.

Donations

In Donations you see the donations coming from the foundation page: donor email, amount (in cents: 10000 is $100), whether it's monthly and whether the payment went through. View only: it fills in from Stripe on its own.

Donations received (with sample data).

PART 6

Your account

Inviting your team, checking your plan and asking for help.

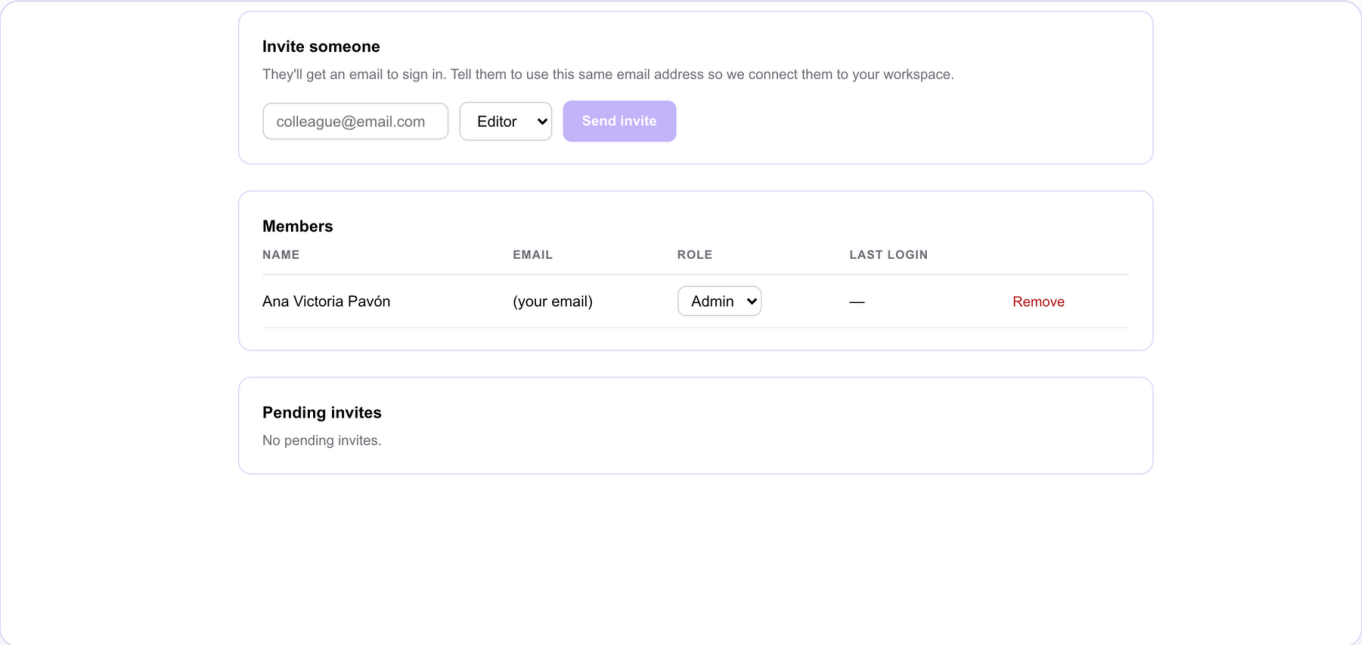

Team · Billing · Support

CHAPTER 18

Team, billing and support

Inviting someone to your team

1. Go to Team .
2. In Invite someone , type their email and choose their role:
   - Editor: can change content (text, events, products).
   - Administrator: can do everything, including inviting other people.
3. Press Send invitation . They get an email.
4. Ask them to go to portal.beytrax.com with that same email. That connects them to your space.

Your team. With “Quitar” (Remove) you close the door on someone who no longer works with you.

> 💡 TIP
>
> The person who only checks tickets at the door doesn't need to be invited to the team: the door link from chapter 10 is enough.

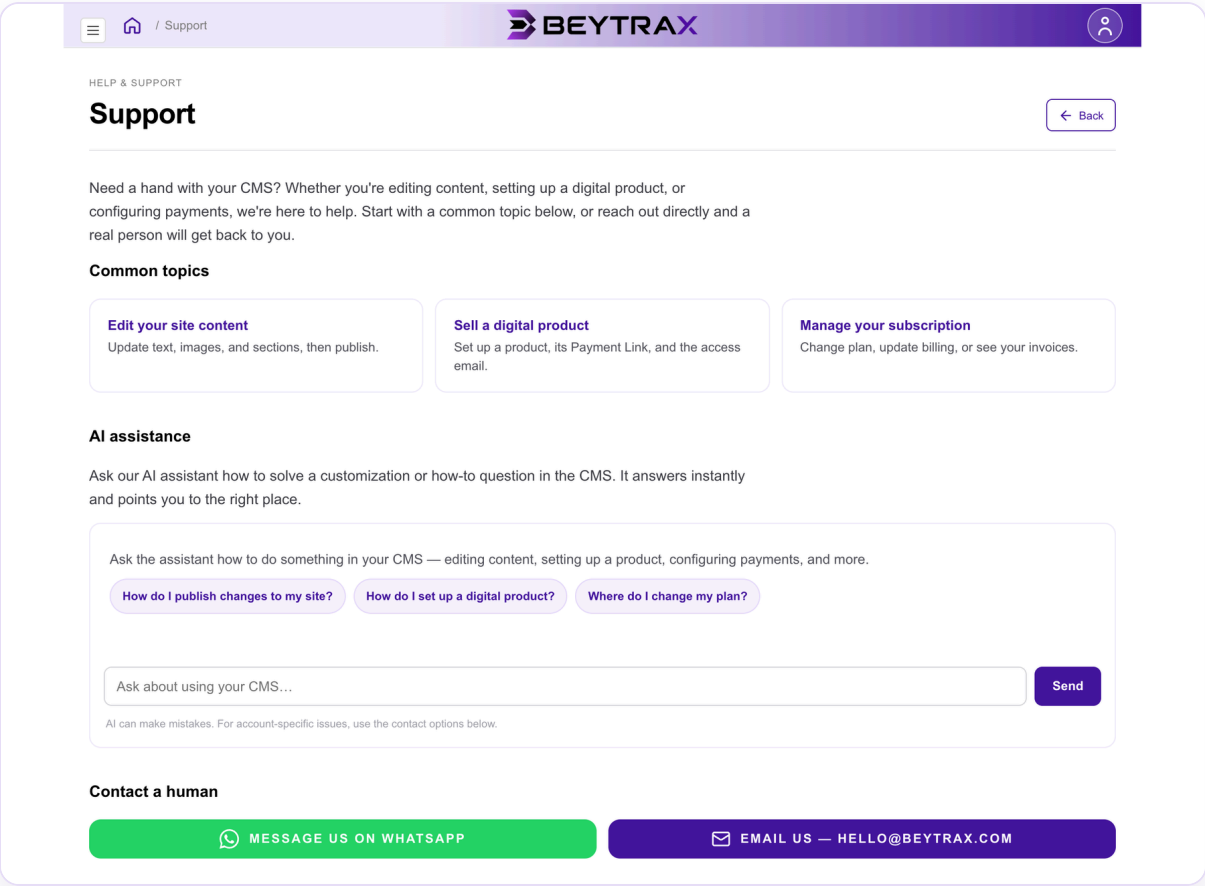

Billing

Here you see your Beytrax plan, whether it's active and when it renews. With Manage subscription you change the payment method or check your invoices.

Support

In Support you have three paths:

- Common topics: quick guides.
- AI assistance: type your question (for example, “How do I publish changes on my site?”) and it answers instantly.
- Talk to a person: by WhatsApp or email.

The Support screen.

Clients and Sites: better not touch

These two options hold the technical settings: the Stripe and Mailchimp keys, the domain, the email language and the QR domain. They're like the building's machine room.

> ⚠️ HEADS UP
>
> If you need to change something in Clients or Sites , talk to Rodrigo first. A change here can affect payments or emails for the whole site.

Audit log

It's the panel's diary: who changed what and when. Handy when something changed and nobody remembers doing it.

PART 7

Quick help

What happens on its own, what to do when something goes wrong, checklists and a glossary of odd words.

Automatic | **What do I do if…?** | Checklists | Glossary

CHAPTER 19

What happens on its own

Things Beytrax does for you, so you don't have to worry about them.

The site updates

About 2 minutes after each Save.

Confirmation emails

On payment, the buyer gets their email with their access or QR tickets.

Thank-you page

After any purchase, the site shows a “thank you for your purchase” page.

Three currencies

Your visitors pick USD, MXN or EUR and see prices at the day's exchange rate.

Recordings to the Archive

Every finished Weekly Talk is saved for members.

Memberships

They switch on when paid and off when cancelled or unpaid. They open or close the Archive.

Voided tickets

If you refund in full in Stripe, the tickets are voided.

Subscribers to Mailchimp

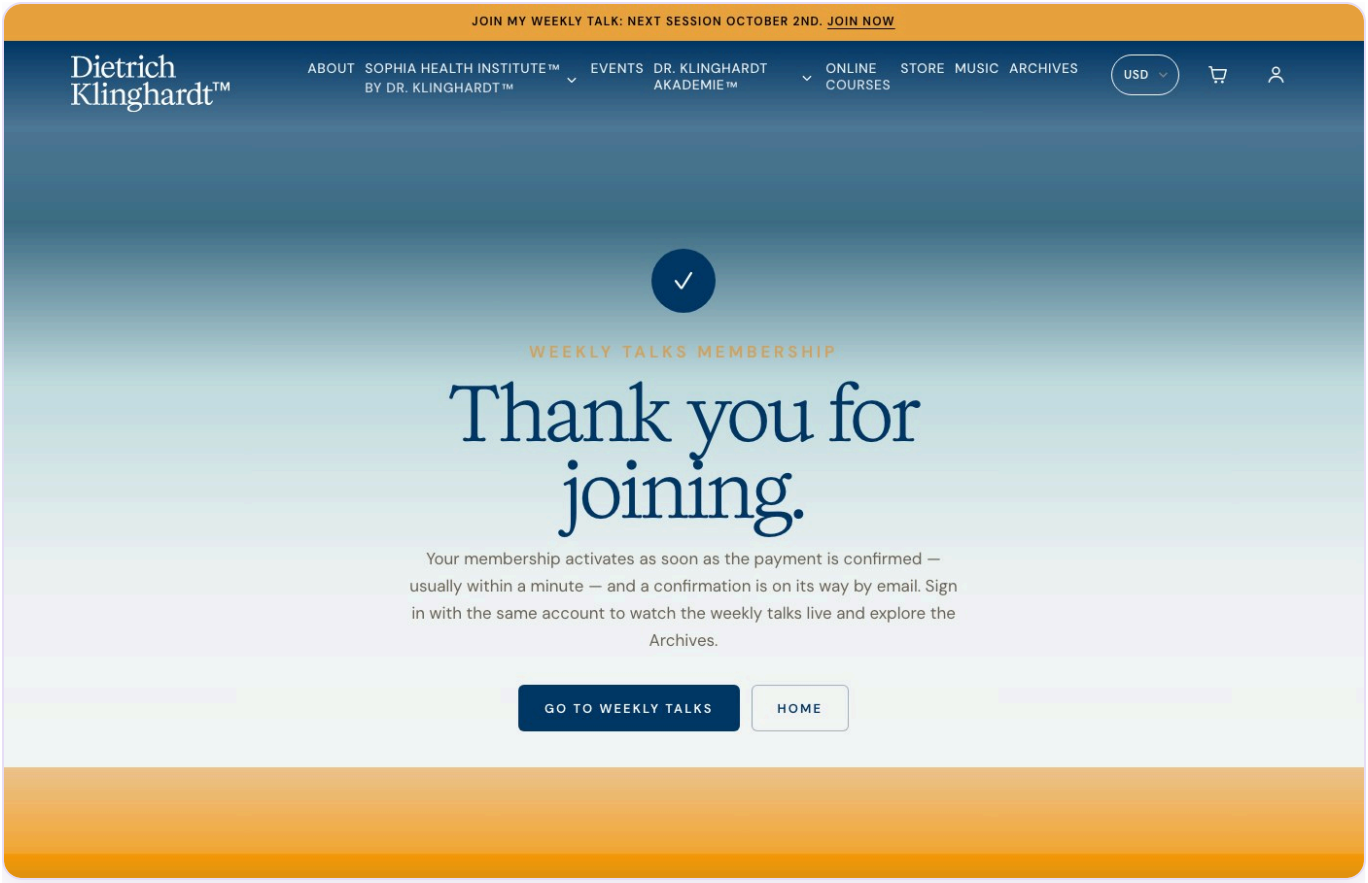

Each confirmed subscriber is copied to your list.

End of stream

If OBS disconnects and doesn't come back, Beytrax closes the live.

Door links that expire

Door links stop working when the event ends.

The thank-you page someone sees right after joining the Weekly Talks membership.

CHAPTER 20

What do I do if...?

The most common questions, with a short answer.

...I saved but don't see the change on the site?

Wait 2 minutes and refresh the page (Cmd + R or Ctrl + R). Check that the Status says Published . If it's still the same after 10 minutes, write to us.

...an event doesn't show on the site?

Check that it's Published or Sold out , and that the date hasn't passed. Past events move to the Past events tab on their own.

...the panel won't let me publish a paid event or product?

Almost always the Stripe Payment Link ID (the plink_… code) or the Checkout URL is missing. The panel marks in red which one.

...the buy button charges for something else?

That event or product has another one's Stripe link. Each thing has its own link (chapter 8).

...a buyer didn't get their ticket?

Ask them to check their spam folder. Look them up in the event Tickets by name or email: if they appear, they paid and their ticket exists. At the door they can be found by name or code even without the QR.

...the door phone won't open the camera?

The browser (Chrome or Safari) needs permission to use the camera. Meanwhile, you can check tickets by typing the code or searching by name.

...someone tries to get in with another person's QR?

If the ticket is named, the name won't match their ID. And if that QR already came in that day, it shows red. Don't let them in and call the person in charge.

...the Weekly Talk won't start?

Check in order: did you press Enable stream ? Does OBS say it's streaming?
③ Is the key in OBS this event's? (Copy and paste it again). Press Refresh in Beytrax.

…the internet dropped in the middle of the live?

Don't worry: members see Reconnecting…. Reconnect OBS as soon as possible. If it doesn't come back within a few minutes, Beytrax ends the stream on its own.

…I forgot to press Finish stream?

Nothing bad happens: without a signal from OBS, Beytrax finishes it on its own after a few minutes.

…someone writes rude things in the chat?

Press Ban on their message and add those words to the Word filter .

…I printed a QR that leads to the wrong page?

If it's editable, open the QR, change Where does it lead? and save: done, no reprinting. If it's fixed, you need to make a new one.

…I want to change the membership price?

It's changed in Stripe and in Beytrax at the same time (chapter 13). Do it with Rodrigo the first time.

…I forgot my password?

At the front door press Forgot your password? .

…I deleted something by mistake?

Write to us as soon as possible by WhatsApp or email, and tell us what it was and what time you deleted it.

CHAPTER 21

Checklists

Print this page and keep it next to your computer.

🔴 Every Weekly Talk

- [ ] Half an hour before: correct date and time in Date and place , and Save.
- [ ] Clean chat (download the previous talk's TXT and Empty chat…).
- [ ] OBS open, camera and microphone working.
- [ ] Enable stream in Beytrax (status idle).
- [ ] Start Streaming in OBS Refresh status active .
- [ ] Check the site: it says Live Now.
- [ ] When done: Stop Streaming in OBS and Finish stream in Beytrax.

📅 New paid event

- [ ] Create the Payment Link in Stripe with the right price.
- [ ] Content: title, summary, description, teacher, language, image.
- [ ] Date and place: start, end, venue time zone, address.
- [ ] Registration and access: Paid with Stripe , price in cents, Checkout URL and plink_… .
- [ ] Purchase policy (if in person).
- [ ] Tickets: QR on, named, entries and opening time.
- [ ] Status Published Save check the site in 2 minutes.

🧩 Multi-day course

- [ ] One event per day, each with its price and its own Stripe link, published.
- [ ] The full-course event with its price and link.
- [ ] In the full course Day passes pick the days check the preview Save.

🚪 On event day, at the door

- [ ] Create one door link per person or door (Create link).
- [ ] Test the link on each phone before opening (and allow the camera).
- [ ] Green = go ahead (compare name with ID). Red = call the person in charge.
- [ ] When done, Revoke the links no longer in use.

CHAPTER 22

Glossary of odd words

If a word in the panel sounds foreign, look it up here.

Archive (Archives)	The private library for members: recordings, PDFs, diagrams and videos.
Draft	Something not yet visible on the site.
Cents	How prices are written: the dollar price with two more zeros. $25 = 2500.
Checkout URL	The Stripe payment link (starts with https://buy.stripe.com/).
Editable QR code	A QR whose destination you can change even after printing.
Fixed QR code	A QR that never changes.
Door link	The link that opens the ticket scanner on a phone, no password. It stops working when the event ends.
Presenter	Chat messages written by Dr. Klinghardt's team, with a special label.
Membership	The monthly or yearly subscription that opens the private Weekly Talks and the Archive.
Mux	The service that takes the live stream to members. The antenna.
Named ticket	A ticket with the name of the person who will enter.
OBS	The free program on your computer that sends picture and sound. The camera.
Day passes	The days of a course that are also sold separately.
Payment Link	A Stripe payment link. Each event and product has its own.
plink_…	A Payment Link's code. It goes in “Stripe Payment Link ID”.
price_…	A recurring Stripe price's code. It goes in the membership plans.
Published	Something already visible on the site.
RTMPS server	The address OBS sends the live signal to.
Slug / Friendly URL	The last part of a page's address. Better not to change it.
Stream key	The stream's secret key. Your house key: never shared.
Stripe	The cash register: charges cards and tells Beytrax.
Subscriber	A person who asked to get the newsletter.

Empty chat	Delete all of an event's messages to start fresh. Can't be undone.
