

Getting Stripe ready to take real payments

The site has **three separate places** that collect money, and each one needs something different from your side before it can go live. This page is a checklist you can work through with your team — tick items off as you complete them.

0 / 10 ready

● Foundation Donations

● Store Checkout

● Payment Links

TRACK 1 OF 3

Foundation Donations

Powers the giving form at </foundation/donate>

Donations route through Beytrax's Stripe platform, then attribute straight to the Foundation's own connected account — so the Foundation gets the funds, but never has to touch Stripe's checkout code itself. Until that account is fully verified, the donation page stays in a friendly "opening soon" state. Nothing breaks — it also just doesn't collect yet.

WHAT NEEDS TO BE READY

- ☐ A Stripe account exists for the Foundation
- ☐ Legal & business details submitted (legal name, tax ID, address, a responsible person)
- ☐ A bank account is connected for payouts
- ☐ Stripe confirms charges are enabled

HOW TO GET THERE

- 1 Go to dashboard.stripe.com and create an account (or sign in to an existing one) under the Foundation's legal name.

- 2 Under **Settings → Business settings**, fill in the legal entity name, EIN or tax ID (if the Foundation has one), registered address, and the name and email of a responsible person.
- 3 Under **Settings → Bank accounts and scheduling**, add the account that should receive donation payouts.
- 4 Check your status: on the Stripe Home page, look for **"You can now accept payments."** You can also confirm under **Settings → Account status**.
- 5 Once that's done, Beytrax will send a secure Stripe connection link — click it and approve the connection. That's the step that actually links your account to the donation page.

TRACK 2 OF 3

Store Checkout

Powers purchases at **/store**

Store purchases use **Dr. Klinghardt's own Stripe account** directly, not Beytrax's. Beytrax only needs a limited-permission key to open a checkout page on your behalf — your full account access, and every dollar, stays with you.

WHAT NEEDS TO BE READY

- ☐ A Stripe account for the store, with payments enabled
- ☐ A restricted API key created, scoped to Checkout Sessions only
- ☐ Final product list ready: names, prices, descriptions, photos

HOW TO GET THERE

- 1 Sign in to (or create) the Stripe account that should receive store payments, and confirm payments are enabled the same way as above.
- 2 Go to **Developers → API keys → Create restricted key**. Name it something recognizable, like *"Beytrax Store Integration."*

- 3 Under permissions, set **Checkout Sessions** to **Write**, and leave every other permission at **None**.
- 4 Click **Create key** and copy it immediately — Stripe only shows it once. Send it to Beytrax through a private channel (a password manager's share link works well). **Never** by plain email, text, or chat.
- 5 Send Beytrax your final product list — name, price, a short description, and a photo for each — so they can load it in for you to review before it goes live.

TRACK 3 OF 3

Payment Links

Powers Events, Courses, and the Weekly Talks membership

These don't run through a checkout on the site at all — a visitor is sent straight to a Stripe-hosted payment page that you create yourself, one per event, course, or membership tier.

WHAT NEEDS TO BE READY

- ☐ Stripe is switched to Live mode (not Test)
- ☐ One Payment Link created per event, course, and the Weekly Talks tier
- ☐ Each link's price double-checked against what's written on the site

HOW TO GET THERE

- 1 In your Stripe Dashboard, check the toggle in the top-right corner and make sure it reads **Live** — links made in test mode can't take a real payment.
- 2 Go to **Payment Links → + New** and create one link for each thing you're selling this way: every individual event, every course, and the Weekly Talks membership.
- 3 Copy each link's address (it starts with **buy.stripe.com/...**) and send Beytrax the full list, clearly labeled with which event, course, or membership each one belongs to.

4

Before sending, check each link's price against the price written on the site page — these live in two separate places, and nothing keeps them in sync automatically.

!

Quick rule of thumb: anything Stripe calls a **Secret key**, or shows you only once, should never travel by plain email, text, or chat. If you're not sure how to share something safely, ask Beytrax first — it takes two minutes and avoids a much bigger cleanup later.

Questions on any of this? Beytrax is happy to walk through it together on a call — just let us know which section is giving you trouble, and we'll take it from there.
